ABSTRACT

Revised every 10 years, this manual includes specific instruments for evaluating schools to appraise their quality and to encourage staffs to seek better materials and procedures. Evaluation is based on the principle that a school should be evaluated in terms of what it is striving to accomplish and according to the extent to which it is meeting the needs of the students enrolled and of the community it serves. Suggestions are given for the appointment and tasks of (1) a steering committee to have responsibility for planning and supervising the entire self-evaluation of the school and (2) a visiting committee to provide a check on the self-evaluation of the staff. Following the evaluation, a series of activities are suggested for stimulating improvements in the services offered by the school. (MF)

FOREWORD

The National Study of Secondary School Evaluation is the body responsible for developing the *Evaluative Criteria*, fourth edition. The first edition of this title was published in 1940, with revisions issued in 1950 and 1960. The current edition reflects the thinking of hundreds of educators who have used earlier versions and forwarded suggestions for improvement. Charles Edwards has served as director of the Revision Program and in that capacity has worked closely with selected committees of specialists and generalists who have contributed their competence, energies, and time toward developing a meaningful and practical evaluation instrument.

The work of the National Study is carried on by a General Committee composed of appointed representatives of the six regional accrediting associations. The committee has been actively involved in the revision process and spent a full week reviewing prepared materials and suggesting ways to improve the instrument. Many believe that the success of the *Evaluative Criteria* is owed not only to the involvement of concerned professional educators but also to the skill, dedication, and wisdom of committee members, who have sought and been receptive to new ideas and have recognized the value of established evaluation techniques. Seven of the present committee members brought experiences with earlier editions to bear on the preparation of this one, thus providing valuable continuity. Educators holding various viewnoints have joined together to develop a modern instrument designed to measure the characteristics of a good secondary school. The success of their efforts will be determined by the users of the fourth edition.

The names of former committee members, listed according to the associations they represented, are as follows:

- New England Association: Clarence I. Chatto, Howard Conant, Jesse B. Davis, William W. Dunn, Donald W. Fowler, Raymond Green, Arthur W. Lowe, Carl Magnuson, Herbert B. Moore, Francis Mullen, Maurice J. O'Leary
- Middle States Association: Harold A. Ferguson, E. D. Grizzell, Richard M. Gummere, Earle T. Hawkins, William Mather Lewis, George William McClelland, Karl G. Miller, Walter J. O'Conner, Edward B. Rooney, S.J., Arnold B. Swift, Charles C. Tillinghast, William A. Wetzel
- Southern Association: Harold P. Adams, T. P. Baker, E. C. Bolmeier, Robert B. Clem, J. Henry Highsmith, Joseph Roemer, William R. Smithey, R. B. Sparks, T. Q. Srygley, S. B. Tinsley, C. R. Wilcox
- North Central Association: George C. Bell, Brother I. Basil, George E. Carrothers, Carl G. F. Franzen, A. J. Gibson, J. T. Giles, Merritt Jensen, J. Standifer Keas, L. R. Kilzer, W. E. McVey, Wilfred M. Mallon, H. C. Mardi, Charles R. Maxwell, Harold H. Metcalf, Floyd A. Miller, E. E. Morley, M. R. Owens, A. A. Reed, W. S. Roe, L. A. Van Dyke, N. G. Wiltse
- Northwest Association: D. A. Emerson, Henry M. Hart, William I. King, M. P. Moe, Cliff Robinson, Philip Soulen, Fred Stetson
- Western Association: A. J. Cloud, William M. Proctor
- Advisory Members: Arthur S. Adams, E. J. Ashbaugh, Paul E. Elicker, D. H. Gardner, J. Dan Hull, Galen Jones, William J. McGucken, M. E. Mushletz, S. D. Shankland, J. W. Studebaker, Ellsworth Tompkins, George F. Zook
- Honorary Members: Clarence I. Chatto, E. D. Grizzell, Earle T. Hawkins, Carl A. Jessen, Ellsworth Tompkins, Floyd A. Miller

Officers of the Cooperative Study and the National Study, since the beginning, are listed below:

Chairmen, General Committee: George E. Carrothers 1933-51

E. D. Grizzell 1951-56
Harold P. Adams 1956-57

vi Foreword

Executive Secretaries:

Carl A. Jessen, Secretary 1933–51 Executive Secretary 1951–60 Roderic D. Matthews 1960–

The staff for research and development consisted of the following:

For the 1940 edition: Walter C. Eells, M. L. Altstetter, Kenneth W. Eells For the 1950 edition: Roy O. Billett, Roderic D. Matthews, James F. Baker

For the 1960 edition: Roderic D. Matthews, Carl A. Jessen, Lorenzo K. Reed, S.J.

Since 1933 when the National Study was organized (originally known as the Cooperative Study of Secondary School Standards), many distinguished men and women have striven to develop an effective evaluation instrument for secondary schools. The Evaluative Criteria is not a book of standards. It does attempt to provide a way to measure the effectiveness of a school, to stimulate a school and community toward establishing a planned program of continuous growth with the main objective being to help a school become better. This is and has been a fundamental philosophy of these associated with the National Study. Many have contributed to promoting this philosophy, but over the years, E. D. Grizzell, Carl A. Jessen, and Roderic Matthews have approached the task with a special dedication. To them, we are eternally grateful.

Many will be interested to know that the General Committee is already planning further evaluation activities. Ad hoc committees on research and vertical districtwide evaluation are already at work, and their reports will be the subject of careful study in the immediate months ahead. Recognition of the need to consider new ways to measure the quality and effectiveness of our educational programs is well known to members of the National Study. The publication of the fourth edition of the Evaluative Criteria is a significant accomplishment, but of equal importance is the committee's awareness that our work is not completed. We expect to meet the challenges of developing improved techniques of evaluation. To accomplish our task, we need the help and assistance of the users of this fourth edition. Your constructive criticism and suggestions for improvement will be appreciated and thoughtfully considered.

MANUAL

The Manual for Evaluative Criteria, fourth edition, is divided into two parts: Part I: The Evaluation of Secondary Schools; and Part II: Instructions and Suggested Procedures. The first part discusses the background and development of Evaluative Criteria and its programs. The second part consists of suggestions for use of the Evaluative Criteria by school staffs in their self-evaluations and by visiting committees.

I. The Evaluation of Secondary Schools

The establishment of standards for secondary schools has been a gradual process. Around 1885, groups of colleges in various regions of the country began to organize. One of the most persistent problems calling for common action was standardization of the entrance requirements among the colleges. The interests of the secondary schools were obviously involved in this problem, and thus some secondary schools were drawn into membership in the college associations.

Once the College Entrance Examination Board had been established (in 1901) to deal with the problem of entrance requirements, the youthful associations of colleges and secondary schools took up the task of raising educational standards. The first step was the setting-up of a process of accreditation. A set of minimum standards was developed, colleges and schools were inspected to determine whether or not they met the standards, and approved institutions were put on "the accredited list." The regional associations of colleges and secondary schools had become accrediting associations.

The National Study of Secondary School Evaluation, active under the name Cooperative Study of Secondary School Standards from 1933 to 1959, is a corporate body administered by a General Committee composed of representatives of the six voluntary regional accrediting associations. This body has gradually influenced a change from maintenance of minimum standards to the work. Changes in membership have, of course, quality of schools and encourage staffs to seek

occurred, but the General Committee has maintained a remarkable degree of continuity of service and has devoted an extraordinary amount of time and attention to the work of the Study. All who have been associated with the enterprise would agree that it has truly been a cooperative activity. The results of the committee's work were offered to secondary schools in the 1940, 1950, and 1960 editions of the Evaluative Criteria and are now being offered, by the National Study of Secondary School Evaluation, in this fourth edition.

The Evaluation of Secondary Schools: General Report (1939) describes in detail the materials and procedures used in the period 1933-39. It supported the recommendation that the best procedure for evaluating a secondary school was to carry out a self-evaluation using the Evaluative Criteria and to have this self-evaluation checked by a visiting committee of qualified teachers, administrators, and specialists. Since 1940, Evaluative Criteria has been used in thousands of schools throughout the United States.

The National Study of Secondary School Evaluation and the antecedent Cooperative Study of Secondary School Standards have been continuously concerned with discovering the characteristics of good secondary schools and with developing means for evaluating schools that progressively improve accreditation procedures. The purpose has been to develop instruments that can be striving for excellence in all aspects of a school's used widely to secure sound appraisals of the

better materials and procedures in order that improvement would be a likely result. The great diversity among secondary schools in the United States has long been recognized as making it impossible to measure schools on a fixed scale or pattern. Differences in size, buildings, equipment, environment, financial support, abilities of students, needs of communities, goals of youth and their parents, selection and preparation of teachers, and many other factors make uniformity impossible.

EVALUATION GOVERNED BY PHILOSOPHY AND OBJECTIVES OF INDIVIDUAL SCHOOL

The Study has developed a proved way of recognizing that schools which are quite different may be equally good. This type of evaluation is based on the principle that a school should be evaluated in terms of what it is striving to accomplish (its philosophy and objectives) and according to the extent to which it is meeting the needs of the students enrolled and of the community it serves. The philosophy and objectives must, of course, be acceptable to some agency (a community, an accrediting association, a state department of education, a board of trustees, a religious organization) if the evaluation based upon such philosophy and objectives is to be recognized beyond the confines of the school. It is obviously unfair to say that a school is of poor quality because it does not prepare students for further academic work when, in fact, it interprets its function as that of preparing youth to enter employment immediately upon graduation and to have a salable skill at that time. It is appropriate to criticize the soundness of such an objective; but if its graduates are good workmen, it is not appropriate to report that the school is of low quality. Similarly, a school can hardly be considered a good school if it is responsible for the education of all the youth in the community and yet offers a program in which only a highly selected part of the youth of that community can make satisfactory progress.

The evaluations resulting from the use of materials and procedures recommended by the National Study of Secondary School Evaluation may be considered as ratios of accomplishment where the quality and nature of work done in a school are related to what should be done in order to satisfy the philosophy and objectives of the school and the needs of the youth who are or should be served by the school. This does not make

the evaluation of secondary schools a simple task; it does, however, establish a sound basis for such an evaluation.

The Evaluative Criteria provides for a statement of the characteristics of the youth and community to be served by the school (Section 2) and the philosophy and objectives of a given school (Section 3). In the succeeding sections are to be found checklist items, supplemental data, and evaluation items. The checklist and supplemental data items are designed to enable the staff of the school to describe clearly what it is doing. If those items do not permit accurate descriptions, they should be modified by changes or deletions. Such changes should be made wherever they are appropriate throughout all parts of the Evaluative Criteria, including the statements of "Guiding Principles." Furthermore, if Evaluative Criteria does not deal with certain phases or areas of the school's program which the members of the staff think are important, they should add descriptions of these features in the appropriate places or as additional sections. The materials presented in the Criteria were developed to assist the staff in giving an accurate description of the school and its work and not to force a description into a given pattern. Changes that may be puzzling to those not well acquainted with the school should be explained and reasons given for the alterations under "Comments" or on attached sheets.

Evaluative Criteria is provided for the convenience of the school staff in making its evaluation. All areas required by the philosophy of the school or to meet the needs of the youth who are enrolled or for whom the school is responsible should be provided with sections or subsections for incorporating the description and should be evaluated. The philosophy and the needs, rather than the Evaluative Criteria, impose the requirements. If the evaluation is to be used to acquire some kind of recognition, such as accreditation, the agency in charge of the recognition may impose other requirements.

SOURCES OF SUGGESTIONS FOR FOURTH EDITION

As was done during the periods 1940–48 and 1950–58, the Study made extensive efforts from 1960 to 1968 to obtain criticisms and suggestions from users of the materials. In addition to the suggestions returned in writing, the Director of Revision visited general meetings and workshops

of the accrediting associations and also individual schools in order to discuss problems, sensitive areas, and suggestions. Authorities were sought to work on the individual sections. These experts were nominated primarily from the regional and national associations, and each was active in his own field. Usually five persons were named to work on each section. Care was taken that all Leographic areas were represented and that teachers, administrators, state department of education personnel, and college and university instructors were included. Each committee met for three days to review the suggestions and to develop an up-todate, improved instrument. Altogether several hundred people from coast to coast and from north to south contributed to the revision.

MAJOR CHANGES IN THE FOURTH EDITION

This, the fourth edition of the Evaluative Criteria, is designed to be used in much the same way as previous editions. Materials are arranged so that the staff of a school can give a clear and extensive description of the school. Along with this description, opportunity is provided for the staff to indicate how well, in their judgment, the work of the school is being done. In both the description and the evaluation, the staff uses a four-point scale -from one to four. The staff is also encouraged to supplement these ratings with a written description of any facet of the program not covered by the Evaluative Criteria. This entire process is referred to as the self-evaluation. The self-evaluation may be undertaken by a school desiring to study and improve itself, as well as by schools undertaking self-study as the first step in meeting accreditation requirements. In either case, a committee outside the school system may be invited to visit the school in order to observe its operation. The visiting committee's evaluation serves as a check on the evaluation made by the school staff.

Some of the significant changes made in the fourth edition are those supported either by research or by suggestions from experienced observers and informed specialists in the various fields, as follows:

- 1. Care was taken to include the new influences and resources that are supporting or shaping the secondary school today.
- 2. The materials were carefully worded so as not to restrict those schools carrying on or implementing new programs. A greater flexibility was

built into the criteria to accommodate a greater variety of school philosophies.

3. Emphasis was placed on simplifying the materials for the sake of clarity as well as facilitating the self-evaluation process. The change from two separate rating scales—one for checklists, the other for evaluations—to a single scale marks a radical point of departure from all previous editions. The single scale should make the *Evaluative Criteria* easier to use and also make the completed study more functional for a school's postevaluation plans.

4. The section dealing with the individual staff member has been greatly simplified and reduced in size, and the material considered unnecessary or irrelevant has been removed. The revised section will be much easier for the individual staff

member to fill out.

5. The section on "School and Community" has been placed ahead of the section on "Philosophy and Objectives." In general, it is accepted that the description of the school and community should precede the establishment of the philosophy and objectives of the school. The school's philosophy and objectives should be related to the characteristics of the school and the community.

6. The section formerly entitled "Program of Studies" has been redesigned and retitled "Curriculum." The change was made because this section deals with considerably more than merely the program of studies. It concerns the over-all

curriculum of the school.

7. Section D-4, "Core Program," has been deleted from the *Evaluative Criteria* because relatively little use was made of this section in the 1960 edition.

- 8. The section on "Foreign Languages" no longer contains two sets of checklist items—one for modern and one for classical languages. Instead, the blank is to be used to evaluate the total foreign language program. If, however, a school concludes that its modern and classical language programs should be evaluated separately, separate blanks may be used—one for the modern and one for classical languages. The cover of the section provides spaces for designating which languages are being evaluated.
- 9. In the fourth edition, there is only one "Physical Education" section. The intent is that the physical education program for boys and girls in many schools may be considered as a single program. Here again, as in the case of foreign languages, if a school staff decides that the two

programs definitely should be evaluated separately, two separate forms may be used—one identified as the program for boys and the other as the program for girls.

10. A section on "Special Education" has been added. It has long been determined that this area needed evaluation; but until the 1960's, not enough schools had separate special education facilities and faculty to warrant its inclusion.

11. The section formerly called "Instructional Materials Services—Library and Audio-Visual" has now been designated "Educational Media Services—Library and Audio-Visual." If a school has two entirely different programs—one for library and one for audio-visual materials and services—two separate forms may be used and so designated on the cover. Thus schools which have two truly separate programs can describe and evaluate each.

12. The section on health services has been omitted from the fourth edition. The services formerly covered in the "Health Services" section have been included in appropriate places in "School Staff and Administration" and "School Facilities."

13. The section formerly called "School Plant" is now titled "School Facilities," because the revised section covers not only the school plant but other facilities as well.

14. Sections X, "Statistical Summary of Evaluation," and Y, "Graphic Summary," of the 1960 edition have been deleted. It was found that the

extent of use did not justify the continuation of the sections. In their place is a descriptive openend "Summary." In it, an autline is provided and the school is requested to identify weaknesses and strengths and to establish priorities for improvement. If the *Evaluative Criteria* is being used for accreditation purposes, this type of summary will roughly parallel the form of the written report of the visiting committees. It will indeed prove useful for the interaction between visiting and self-evaluation committees.

15. The 1960 edition of the Evaluative Criteria was published and used by both junior and senior high schools. In 1963, a junior high school Evaluative Criteria was published and is in the process of being revised at the present time. With this fact in mind, the fourth edition of the Evaluative Criteria is intended to be used by those schools that are either senior high schools or schools having the junior high school in combination with the senior high school. The present publication is not meant to be an instrument for the evaluation of the junior high school/middle school as a separate institution.

The fourth edition of the *Evaluative Criteria* resembles the 1950 and 1960 editions in form and general recommendations because the widespread support and use of the earlier materials appear to justify such continuity. Reports of research on the subject confirm the conclusion that the basic principles of the National Study materials and procedures are effective.

II. Instructions and Suggested Procedures

The Evaluative Criteria is designed to serve the needs of various types of secondary schools and programs. The administrator of a school preparing for evaluation should obtain a bound copy of the fourth edition of the Evaluative Criteria, read the Manual carefully and review other sections of the instrument. A determination should be made of which sections are applicable for a thorough evaluation of the school.

THE SELF-EVALUATION

The next step is to place an order for materials to be used by the staff for the self-evaluation. The amount of material will depend upon size of the school staff, its financial resources, and requirements of the regional accrediting agency or state department of education. Quantities listed below will, in most cases, meet minimum requirements.

- 1. Two bound copies of the Evaluative Criteria. fourth edition.
- 2. Three unbound sets of the general sections-Sections 1 through 11
- 3. Two copies of Section 10 for each staff member.
- 4. Two copies of each subject section—Sections 4-1 through 4-18—for the subject fields offered by the school.
- 5. The above suggestions represent what may be considered the absolute minimum order if a visiting committee is to be used. It is highly desirable to secure the following materials in addition:
 - a) One section for each member of each subcommittee of the school staff responsible for the self-evaluation of that section. If there are six members of the staff who are responsible for Section 9, "School Staff and Administration," then six copies of this section should be secured in addition to the two mentioned in item 2 above. If there are four members of the subcommittee responsible for Section 4-6, "English," then four copies in addition to the two in item 3 above should be ordered.

- ministration," for each member of the board of education or the board of trus-
- c) A copy of sections of the Evaluative Criteria used in the self-evaluation for each two or three members of the staff. These are for reference purposes when subcommittees are reporting to the entire staff, and obviate unnecessary reading aloud and, thus, expedite reporting. If subcommittees plan to project their reports on a screen, such additional copies will not be required.
- d) Many schools have found it desirable to provide each member of the steering committee and the chairman of each section with a copy of the Manual (Section 1).

Duties of a steering committee

Experience has shown that it is desirable to appoint or select a "steering" committee to have responsibility for planning and supervising the entire self-evaluation of the school. The size of this committee may depend on the size of the school staff, but generally a small committee seems to be more effective. Four to seven members, including the principal or one of his assistants, would be large enough in most schools. This committee has the responsibility for naming the members of all subcommittees, setting up a time schedule for the self-evaluation, establishing a method and a schedule for subcommittee reports, and providing the necessary materials and supplies to the subcommittees. It is not the responsibility of the steering committee to do the evaluation, but rather to inform the staff of the value and purpose of the self-study and to see that every staff member becomes involved.

The self-evaluation process is an experience in professional growth and because of the complexities of modern secondary school education, considerable time is needed for observation, deliberation, penetrating thought, and meaningful conb) A copy of Section 9, "School Staff and Ad-sideration. Each school should carefully plan a

8

schedule that will provide the staff with adequate time for the study.

The steering committee should name first the Subcommittees on School and Community and Philosophy and Objectives. The work of these two groups should be completed before the other subcommittees commence their work. However, the philosophy and objectives should not be finalized until the section "School and Community" has been completed and the data analyzed.

After the subcommittees have completed their respective assigned self-studies, it is essential that they report to the faculty. The steering committee then prepares the Summary of the Self-Evaluation (Section 11), identifying the major strengths and weaknesses that reflect the consensus of the faculty.

With careful planning and preparation it is possible to complete the full evaluation process in one year. Usually the sponsoring regional accrediting agency provides consultant services to schools scheduling evaluations and advises the principal of the most desirable approach in view of local circumstances. It is a desirable practice to invite a consultant to meet with the school staff to explain the background, policies, and procedures of the evaluation program.

Work of subcommittees

Normally each member of the staff will serve on two ommittees, one dealing with general Sections 2 through 9 and the other dealing with an area of study covered by Sections 4-1 through 4-18.

Staff preferences for committee work assignments are usually sought by the Steering Committee.

Section 2, "School and Community," and Section 3, "Philosophy and Objectives," are the two basic sections upon which an evaluation rests. The school's philosophy and objectives should be geared to meet the needs of the students and the community served. Information requested in the "School and Community" section provides the staff with the type of information necessary to develop a meaningful philosophy and a statement of objectives. The subcommittee responsible for developing the philosophy should feel free to use any resource that deals with basic ideas regarding secondary education. References are not included in this Manual or in Section 3 since these might impose a direction or restriction that would be are disagreements about the meaning of any part, objectionable. The subcommittee should involve all they should be resolved by consultation with a

members of the staff in developing a philosophy and objectives that meet with the approval of the school staff. Several staff meetings may be necessary before a statement is acceptable to the staff.

When the statement of philosophy and objectives has been accepted, all members of the teaching staff should examine their teaching practices, procedures, and courses of study to see if they reflect the philosophy of the school and needs of the community.

Well in advance (usually 6 to 9 months) of the scheduled visit of the outside committee, local subcommittees for the areas 4 through 9 and 4-1 through 4-18 should be appointed. It is probably better to have teachers and specialists on the subcommittees dealing with their specialties, but it is important that others also be included. Teachers of English should help with the evaluation of other subject areas and should be helped by teachers of those subjects in the evaluation of instruction in English. Teachers not directly involved in the provision for guidance services should help in the evaluation of those services. The total program of the school can be better understood by all members of the staff as a result of the work of these subcommittees.

Consideration should be given to the part that parents and students can play in the self-evaluation process. Some schools have had parent and student representation on all subcommittees, while in others such representation has been limited to selected committees such as Philosophy and Objectives, School and Community, Student Activities Program, and Guidance Services. In some schools students and parents have had no part in the self-evaluation. The principal of the school and members of the steering committee should know the situation well enough to know how the interests of the school can best be served.

Each subcommittee should have the responsibility of completing the self-evaluation of the area assigned to it. This involves examining the guiding principles critically and making any modifications that seem desirable; collecting all data, exhibits, and explanations required for the area; marking each checklist item; rating each evaluation with the number that is judged to be correct; and reporting the results to the entire faculty for modification or approval.

Each member of a subcommittee should read the page of "Instructions" in each section. If there

member of the steering committee. The statement of guiding principles should be read and discussed, and any modifications that seem desirable should be made. Again, it is emphasized that individual schools not only may, but are encouraged, to add or delete material if they decide that such changes will give a more accurate picture of their school.

Checklists and evaluations

The checklists and evaluations should be evaluated on the following four-point scale:

- Excellent
- 3 Good
- 2 Fair
- Poor or missing 1
- Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to indicate an evaluation that is good but less than excellent, circle the number 3. Likewise, to indicate a trait that is less than good, but better than poor, circle the number 2.

understanding these directions. Examine the and adds emphasis to those major findings. The

statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. This space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary data and additional areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program-or additional subject areas-cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Summary of the Self-Evaluation (Section 11)

In any evaluative undertaking, it is desirable to summarize the findings, and a school evaluation is no exception. A summary provides many benefits, as well as marks the conclusion of the study. Let us consider an example that will help in It constitutes one form of record of major findings

self-study steering committee is responsible for completing the Summary section.

Using the major findings as a base, the school can embark on a program, according to a schedule of priorities, to improve the conditions found to be below a desired level. After a sufficient length of time for progress to have been made, the summary and the priorities established can be reviewed to provide the basis for a follow-up of the evaluation. Regular follow-up and review help to make evaluation a continuous process rather than one that is completed and then forgotten. Continuous attention such as this is conducive to improvement of any school.

The form of the summary should be kept simple and short; yet it should concain the major findings of the report. It is suggested that two general types of entries be made in the summary: one citing strengths and one citing weaknesses that need attention. A school will want to consider that portion of each section of the *Evaluative Criteria* entitled "Special Characteristics." From this section, the *major* strengths and weaknesses can be discerned and a description of them placed in the summary. The order of the summary statements should follow the same order as the section listing below:

- 2 School and Community
- 3 Philosophy and Objectives
- 4 Curriculum
 - 4-1 Agriculture
 - 4-2 Art (Including Crafts)
 - 4-3 Business Education
 - 4-4 Distributive Education
 - 4-5 Driver and Traffic Safety Education
 - 4-6 English
 - 4-7 Foreign Languages
 - 4-8 Health Education
 - 4-9 Home Economics
 - 4-10 Industrial Arts
 - 4-11 Mathematics
 - 4-12 Music
 - 4-13 Physical Education
 - 4-14 Religion
 - 4-15 Science
 - 4-16 Social Studies
 - 4-17 Special Education
 - 4-18 Trade, Technical, and Industrial Education
- 5 Student Activities Program
- 6 Educational Media Services—Library and Audio-Visual
- 7 Guidance Services
- 8 School Facilities
- 9 School Staff and Administration
- 10 Individual Staff Member

Of course, any section not evaluated by the school should be omitted. The following are examples of the two general types of entries to be used in the summary section:

Example 1

MAJOR STRENGTH OF THE SCHOOL

Cited in Section No	
Section title	Page(s) 333

Description of Strength:

A well-planned system of teacher assistants provides teachers with released time from clerical duties for more creative work.

Provisions That Contribute to This Success:

Money is available for this purpose. The system is well planned. It has teacher acceptance. The staff has a professional, forward-looking attitude.

Example 2

MAJOR WEAKNESS OF THE SCHOOL

Cited in Section No	
Section title	Page(s) 298

Description of Weakness:

The school does not have a comprehensive testing program. The achievement testing is irregular and given at only one grade level. Entrance testing is not carried out for incoming ninth-grade students or transfers. There is no schedule available of the tests administered in the school. The school has no written policy or suggestions for use of test data.

Recommendations for Improvement:

A national standardized battery such as the Iowa Tests of Educational Development or Sequential Tests of Educational Progress should be administered annually in the fall.

THE VISTING COMMITTEE

The complete evaluation of a secondary school as recommended by the National Study of Secondary School Evaluation requires the services of a visiting committee. The purpose of the visiting committee is to provide a check on the self-evaluation carried out by the school staff. This check is required if the evaluation is to be used in an accreditation or approval process, and is valuable when the evaluation is used to interpret the work of the school to the community, or, in the case of an independent school, to the parents, alumni, and trustees.

Practices vary in different states and regions where evaluations are carried out. Size of committees, length of visit, intensity of work, method of selecting committees, schedules of visits, and methods of financing the work of committees are different in different areas. Each agency, county, state, or regional association or cooperating group of schools should study its own situation and make careful plans to fit the circumstances. Many factors, such as travel conditions, amount of experience with evaluations, interest in in-service education, financial status, responsibility of sponsoring agency, and number of schools should be considered. The following suggestions should not be interpreted as requirements, but should be modified as circumstances and experience indicate modification to be desirable.

Composition of the committee

The agency sponsoring the evaluation should select the committee. Care should be taken that the committee include representatives for all major subject fields as well as persons who are experienced in administration, guidance, and library and audio-visual services. It is not essential that all specialties be represented, but staffs of visited schools are usually better satisfied if such representation is provided. The school should have the privilege of vetoing without explanation any name on the list of recommendations of the agency sponsoring the evaluation.

The selection of the chairman for the visiting committee is of paramount importance, and, when possible, the nominee should be agreed on before the end of the school year preceding the visit.

The size of the visiting committee varies with the size of the school, the number of days that will be available for the visit, the amount of experience of visitors, the interest in using the visit as a phase of in-service education, and the willingness of the visitors to work long hours. In some states or regions, large or small committees are used for a period of from three to five days, with work sessions in the evenings of the first two days. Some have found it useful to assemble the committee on the evening before the first visiting day to meet the faculty and administrative personnel and complete the organization of the committee.

Work of the committee

The visit of a committee is a highly professional undertaking. Members should observe, visit,

and inquire for the purpose of getting as comprehensive a view of the work of the school as is possible in the time available. Their attitudes should encourage free discussion of the work of the school. Staff members of the school should be given an opportunity to explain fully what they are doing, rather than being made to feel defensive. Individual members of the committee should avoid making criticisms or suggestions to members of the school staff.

The members of the visiting committee can do their work best if the school is operating on a normal schedule. Everyone in the school will know that visitors are present, but every effort should be made to have the school carry on as it would if no visitors were present, rather than put on a "show" for their benefit.

The visiting committee is normally organized into two sets of subcommittees, with two or more members on each subcommittee. One set studies the general areas, such as the curriculum, guidance services, and the school facilities; and the other set of subcommittees is responsible for the subject areas.

Since evaluation of individual teachers is not included in the *Evaluative Criteria*, the purpose of observation of classes is to provide a basis for checking the evaluations in the subject sections (Sections 4-1 through 4-18) and for making recommendations relative to the teaching, physical facilities, use of library, and outcomes of instruction.

All of the subcommittees should examine the "School and Community" and the "Philosophy and Objectives' sections of the self-evaluation. Each general and subject area subcommittee should examine its assigned section of the self-evaluation, noting any changes that have been made in the statement of Guiding Principles, and then proceed to check each checklist item and make a list of the areas that require further investigation, and check each evaluation item. When a change is made in the self-rating of a checklist item or an evaluation, a line should be drawn through the rating and the revised rating circled. The visiting committee should use a color of ink or lead different from that of the self-study committee. The rating assigned by the school should, however, remain legible. It is worth noting that some subcommittees may need to look at some other sections of the self-evaluation in order to gain insight into other areas that impinge on the one for which they have direct responsibility.

Reports

Each subcommittee, in addition to checking the evaluations and making the changes to be recommended to the visiting committee, should prepare a written report which, when approved by the entire committee, will be included in the written report to the school. Both good features and suggested changes should be included.

The visiting committee schedule should provide time for each subcommittee responsible for a general area to present an oral report to the entire committee.

The written report is normally prepared by the chairman of the visiting committee from the reports submitted by the subcommittee and sent to the school as soon as possible. It should include an appropriate introduction and a concluding statement, which are primarily the responsibility of the chairman.

The chairman should accept the responsibility for the quality of the written report. He should edit the report carefully so that it is accurate, free of ambiguous or incomplete statements, and mechanically well organized. Much of the value of the entire evaluation process may be lost if the written report shows evidence of carelessness or hasty and thoughtless expression. It should be remembered that members of boards of control and others who are not familiar with the procedures used in evaluations may read the reports, and the parts prepared by the chairman should give them the information they need. Since the school has been evaluated on the basis of its own philosophy and objectives, a copy of each of these statements should be attached to the report. The agency sponsoring the evaluation should inform the chairman how many copies of his report are required.

Many times, as the final event of the school visit, the chairman and committees give oral reports to the school's administrators and any others the administrators feel should be present. It is not recommended that reporters for local newspapers be invited to hear the oral report inasmuch as the oral report should be immediate and off the record. The more carefully and thoughtfully prepared written report may be given wider publicity.

SUGGESTED ACTIVITIES FOLLOWING THE EVALUATION

Evaluation should be a stimulating force leading to definite improvements in the services of-

fered by the school to its students and the community. The entire process in a forward-looking school will include self-analysis of the school's program and services; careful consideration of the findings and recommendations of such self-evaluations; objective checking of the school's analysis by a visiting committee; cral and written reports to the school by the visiting committee; and a resultant program of constant improvement by the school itself.

In one sense, it is not within the province of this manual to suggest specifically to a school what it shall do after the evaluative process as such has been completed. Regional accrediting associations, state departments of education, and local school systems have frequently developed, and will doubtless continue to develop, helpful follow-up programs. However, some suggestions arising out of experiences of various kinds of schools that have been evaluated over the years may help other schools undergoing their first formal evaluation.

The following points are offered, therefore, purely as suggestions:

- 1. The worst thing that could happen would be for nothing to be done; and almost as bad would be an attempt to change everything "overnight" and thus achieve a most unwholesome state of "educational indigestion." The logical process for most schools is to develop a carefully organized plan for improving the school's program over a period of time, in line with the findings of the evaluation.
- 2. The principal and his staff should become familiar with the information contained in the written report of the visiting committee. In most schools, all the members of the faculty will want to read the report carefully. In other situations, the principal may pass on to the faculty the essential findings from the report, but he may consider the report as meant for himself rather than for the faculty. Each principal may use his discretion in this matter, but every member of the faculty should be thoroughly familiar with the main findings concerning both strong and weak areas of the school.
- 3. It should hardly be necessary to point out that practically all schools will have some evaluations that are high and others that are low. There is no real justification for being unduly complacent about high evaluations or unduly depressed by low evaluations. More important than a low or high evaluation in a given area is the extent to which plans are made for improvements and in due

course whether actual improvement is noted or whether there is no improvement at all.

- 4. Schools that have been well organized, with committees to carry on the original evaluation, may wish to retain the same committee structure for a program of follow-up and improvement. It is suggested that a "rest period" for the committees is usually a desirable procedure, psychologically. Each principal will have to decide the exact point of time at which committees should be reactivated.
- 5. In deciding just what to work on first, schools may find it helpful to fill in a chart somewhat along the lines of that shown at the bottom of this page.

The chart may be filled in with items obtained from the written report of the visiting committee, the Summary of the Self-Evaluation, and the various *Criteria* sections. A separate chart might be made for each section of the *Criteria*. The various charts may be developed as cooperative faculty projects, with suggestions for each area coming largely from the teachers who worked in that area during the self-evaluation period.

6. In faculty meetings and group discussions, problems suggested by the chart below may be taken up. Questions such as the following may be asked:

For column 1:

What desirable element makes these areas good? How can we go about seeing that this same success is carried into other fields?

For column 2:

Is the difficulty due to administration? student reactions? lack of teacher interest? lack of finances? or simply oversight?

Have we, perhaps, made no one definitely responsible for the items listed?

Would a change in sponsors help the situation? Who will be responsible for improving the program from now on?

For column 3:

Why should they be done in this school?
Who should do them?
How and when do we plan to start?
How can we determine the probable success of our efforts?

For column 4:

Why are they not applicable to this school?

If changes could be made to bring about conditions where they might become possible, would such changes be worth the effort?

Will the students suffer if these conditions are neglected?

In attempting to arrive at answers to these questions, too much emphasis cannot be laid upon the wisdom of using every opportunity to keep the staff aware of the school's stated philosophy and objectives as well as the educational needs of the students attending the school. Constant effort will be needed to close the gap between theory and practice in finding solutions to the questions raised.

- 7. In interpreting the visiting committee report to the faculty, it is exceedingly important to use tact, so that the reaction of the teachers will be a "wholesome dissatisfaction" leading to a determination to work to improve the situation rather than a disgruntled attitude leading to the reaction of "What's the use?" It is perhaps as important to keep on doing well the things that are reasonably satisfactory and to try to make them still better, as it is to pull up weak areas. Talking about and emphasizing weak points alone is not wholesome.
- 8. Some portions of the recommendations may well be taken up with members of the board of control or with the local parent-teacher association. The extent to which lay groups will be made familiar with the complete report will depend on the local situation. In schools where students and parents have assisted in the evaluative process,

1. Things being done well	2. Things achieved on a less desirable level	3. Things not done which should be done	4. Things not done which perhaps will not, cannot, or should not be done

Recommendations already completed	Recommendations now in progress	Recommendations planned for the future	Recommendations found invalid; explanations

they will of course be interested in and concerned with the results. Needless to say, presentation of any results should be accompanied by careful description of the entire evaluative process.

- 9. It is important that the staff of the local school call to the attention of the sponsoring agency any errors or misinterpretations that appear in the report. The modifications should not be submitted in a defensive way but rather accepted as a responsibility of the school to keep the record accurate. The sponsoring agency is interested in avoiding errors and welcomes explanations that will improve the accuracy and completeness of the report.
- 10. A yearly progress chart of the status of each recommendation is helpful in keeping the total picture in view. A chart listing all recommendations and the progress made on them has been used successfully. The categories shown in the chart above may be used.

It is recommended that general publicity not be given to a report unless or until opportunity is available to explain and discuss the whole purpose and process of the evaluation. Readers of the report may get distorted views of the school because they lack understanding of the total process of this type of evaluation. The General Committee of the National Study of Secondary School Evaluation does *not* approve of using the report of an evaluation in the advertising literature of a school. The committee does believe that many schools have profited by evaluations carried on as described above.

The regional accrediting associations have developed complete manuals for the procedures to be followed in the self-study and by the visiting committee. A school about to be involved in the accreditation procedure should secure their association's manual and follow it carefully.

It is hoped and believed that this fourth edition of the *Evaluative Criteria* will prove to be even more valuable than the previous editions.

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The school exists primarily for the benefit of the youth of the community or the group which it serves. The distinctive characteristics and needs of the people and groups of people of the school community, particularly those of the youth, should be known.

The differences among people, their vocational interests and aspirations, and their abilities all exert an influence on the type of

education provided. Every school community inevitably is interrelated with other communities and is a part of larger communities, particularly the state and the nation. The school should therefore adapt its general philosophy, specific purposes, and its educational program to its own community and to the larger communities of which it is a part.

EXPLANATIONS

Evaluation of secondary schools as developed by the National Study of Secondary School Evaluation is based partly on the extent to which the needs of students enrolled, or those who should be enrolled, in the school are being met. Since these needs are related to resources and opportunities in the environment, it is necessary that the community as well as the student body be described. This section is prepared to permit such descriptions to be made systematically and with a minimum of effort.

Much of the information called for is not easily available in some communities. Those responsible for preparing this section will have to decide whether to seek accurate information through detailed research procedures or to take what is readily available and indicate the inadequacies of the description. The school committee responsible for filling in this blank should not hesitate to extend tables or questions that seem incomplete and omit those that are inappropriate with respect to the school or community. The goal is to give the most complete description possible of the student body, the community or group

served by the school, the opportunities for youth, and the hopes of their parents and friends. Perhaps the question should be, "What is important to know about the young people and the community supporting this school in order to know whether the school is meeting the needs of the community?" The purpose of this section is to help find an answer to that question. Because, among schools, the staff, time, and other resources available for completing this section will vary, the completeness and adequacy of the description will also vary.

All schools—public and nonpublic—have an important obligation to know the nature and needs of their patrons. They should also be concerned about the activities and agencies of the community in which they are located. All schools should present, in the best available form (statistical or descriptive or both), data and information equivalent to what is called for in this section. A nonpublic school which serves as a general secondary school for a community should be able to demonstrate that it provides adequately for the needs of that community.

DEFINITIONS

The students of a public school are the young people enrolled in the school. Those responsible for the public school should have considerable knowledge about the youth of school age in the district supporting the school, not only those attending, but also those who for any reason are not in attendance, in order to determine how well the school is meeting its responsibility. If a school is serving only part of a community, an attempt should be made to report the special characteristics of this part either in a general or a detailed statement.

The *students* of a *nonpublic school* are the students enrolled in the school.

The school community for a public school is the area and population of the district that is legally responsible for the support and control of the school.

The school community for a nonpublic school is primarily the parents of the students who are enrolled, except that there are usually important resources in the vicinity which should be known and used to supplement the resources of the school.

I. BASIC DATA REGARDING STUDENTS

A. ENROLLED STUDENTS AND GRADUATES

1. In the space below enter data for current year (as of October 1) in the last group of three columns, and for the preceding years in the preceding groups of columns, the three columns at the left being for the earliest year. Enter data only for the grades in the school as organized—three-year, four-year, five-year, or six-year unit. If necessary, change

designation of the school grades to conform to actual organization of school. If the school is ungraded or for other reasons the organization does not lend itself to this table, modify or replace it so that the enrollment of the school is accurately described.

2. Describe any studies that have been made regarding the progress of a 3. Increasion of students who entered the lowest grade at the same time of attach sheet).

a 3. Indicate the significance of these data to the objectives and programs e of the school.

B. STUDENT ABILITY

- 1. Academic ability
- a) If records of intelligence or academic ability tests are available, give number of students in each of the following IQ or percentile ranges. If the school does not have data suitable for this table, give equivalent distribution either in this form, revised as necessary, or on a separate sheet. If neither request can be met, describe briefly the general academic ability of students. If the school is ungraded, or for other reasons the organization does not lend itself to this table, modify or replace it so that the school is accurately described.

Range*		Seventh	Еідити	ghth Nanth	Tenth	Eleventh	- Twelfth	Тотаг	
ΙQ	National Percentile	Grade	GRADE	Grade	GRADE	Grade	GRADE	Number	Percent
Over 124	Over 94				•		; '		
117-124	8594			and the second s					
109-116	70-84

Philosophy and Objectives

رې)
Q)

NAME OF SCHOOL	 	 	 DAIL	 	
Prepared by					
		 		 · · · · · · · · · · · · · · · · · · ·	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The philosophy of a school is a framework of basic principles of education that express the staff's convictions on such essential points as the scope of the school's responsibility for the education of youth, the nature of the educative process, the characteristics and needs of the students whom it seeks to serve, the content and methods of instruction, desirable types of student activities, and the outcomes to be attained. If the philosophy and objectives are to be functional, all members of the staff should participate in their formulation, rather than merely endorse a statement that they had no part in developing. A school may wish to consult or involve students and patrons in the development of the school's philosophy and objectives. The objectives of the school should be specific aims stated in harmony with the school's philosophy. They are tangible guidelines for the school's future position.

Each school or unified group of schools should determine and develop its own educational philosophy, so long as this is consistent with the principles of American democracy and consistent within itself.

In a school evaluation, the philosophy and objectives of the school bear the same relation to the evaluative procedures as they do to the operation of the school. The evaluation is a set of judgments upon the extent to which the school is actually accomplishing what it is properly trying to accomplish. During the self-evaluation, the staff studies every policy, every program, every attitude and

procedure, measuring each of them against the accepted philosophy and objectives and against the nature and needs of the students.

The staff first studies the characteristics of the school and community and the statement of philosophy and objectives. The members of each subcommittee attempt to understand the objectives and to enter into their spirit. They judge each phase of the school's program as described in the checklists and evaluations. They consider how well each practice conforms to the philosophy and objectives and how appropriate it is for these students. Thus, they evaluate the effectiveness of the school's efforts to fulfill its purposes.

If a visiting committee is used, it first studies the characteristics of the students served and the statement of philosophy and objectives. The members of the committee attempt to understand the philosophy and to enter into its spirit. For the duration of the visit they try to put their own philosophy into the background and to accept as their own for the time being what the school staff has given as the philosophy and objectives of the school. They judge each phase of the school's program as described in the checklists and evaluations and verified by the committee's observations. They consider how well each practice conforms to the philosophy and objectives and how appropriate it is for these students. Thus, they evaluate the effective. ness of the school's efforts to fulfill its purposes.

29

I. STATEMENTS OF PHILOSOPHY AND OBJECTIVES

The philosophy and the objectives of a school cannot be divorced. The philosophy is more than a statement of objectives or changes that the school seeks to achieve in the behavior of students. It is an expression of fundamental beliefs concerning the role of the school in society, its responsibility in providing educational opportunities, the nature of the educative processes, and the scope and relationships of services that are regarded as essential in attaining objectives.

The Statement of Philosophy

One approach to the task of formulating a statem.nt of philosophy is for the staff to consider pivotal questions concerning the direction, scope, and processes of the educational program.

The following questions illustrate types of queries that may serve this purpose. They are suggested for study and discussion, and not as the sole means of structuring a school's philosophy.

- 1. What are the responsibilities of the school to the community; of the community to the school?
- 2. What are the common concerns of students, regardless of the differences among them in academic capacity?
- 3. How does the school identify individual differences, abilities, and capacities, and how does it adjust methods, materials, and programs to foster individual development?
- 4. What is a desirable relationship between student and student, student and teacher, teacher and administrator, administrator and community?
- 5. How does the school identify the changes occurring in American so iety? How does it best equip students to understand and react to them now and in the future?

These questions are intended to suggest areas for consideration; the actual content of the statement must be developed cooperatively by the staff. The final statement will be an outgrowth of the thought and discussion of all concerned. Approval of the superintendent and the board of control may be sought before the philosophy is finally accepted.

The Statement of Objectives

In preparing the statement of objectives, the staff sets forth in specific terms what it is trying to do, consistent with its statement of philosophy, to meet the needs and interests of its pations. A statement of an objective is likely to be derived from answers to general questions such as: In regard to a specific outcome: (1) What are we (the staff) trying to do? (2) To or with whom are we attempting

to achieve this outcome? How? (3) What characteristics is the school seeking to develop in its students?

Following are three hypothetical examples of statements of objectives:

- 1. Students share educational experiences through required courses that provide opportunities for the acquisition of skills, attitudes, values, and knowledge essential and meaningful to all.
- 2. Students develop an understanding of the principles of democracy, an awareness of the importance of democracy, and a desire to participate in democratic activities. The school attempts to achieve these aims through:
 - a) Classroom instruction that emphasizes an understanding of democratic citizenship.
 - b) Discussion of current events in the classroom.
 - c) An organization that includes an active student government.
 - d) Hor groom organization that is student-centered.
 - e) Provision for student participation in patriotic events.
 - f) Assembly programs by students.
 - y) Procedures for student participation in formulating and enforcing the rules and regulations of the school community.
 - h) Provision of opportunities for volunteer service in community and school activities.
- 3. Students develop the attitude that the individual's own efforts are highly important in realizing his potentialities. We attempt to achieve this objective through:
 - a) Individual instruction.
 - b) An honors program.
 - c) Guidance.
 - d) Cooperative work programs.
 - e) Evaluation of scholastic achievement.
 - f) Athletics and other extracurricular activities.

The above examples illustrate a useful form. The staff is quite at liberty to state objectives and methods in any way it sees fit.

Other sections of the *Evaluative Criteria* supply details on means for attaining the objectives and for gauging how far the school has progressed toward their attainment. But here, in Section 3, is the overview, the place to develop the broad outline of what the school is currently trying to achieve.

Another approach to formulating a statement of objectives is to draft a series of position statements on the scope and characteristics of the educational program and to seek staff and lay consensus on direction. Where do staff and patrons stand on key concepts about the nature and means of secondary education in the American social context?

	Illustrative of propositions which produce a clarification of staff and patron positions are the following:
1.	The curriculum, instructional program, and special services of High School should be so planned and implemented in relation to the interests, talents, and future plans of students as to encourage all students to continue through to graduation on a voluntary basis.
	a) Consensus position: Agree; Disagree; Agree, with modification
2.	The major emphasis of the educational program in the secondary school should be on a continuing and broadening program of general education, adapted to the characteristics of the students served, and directed primarily to developing the full potential and a maturing sense of social and civic responsibility in each student.
	a) Consensus position: Agree; Disagree; Agree, with modification b) Modification:
3.	The instructional program should reflect good balance between the study of past cultures and consideration of contemporary works and social changes.
	a) Consensus position: Agree; Disagree; Agree, with medificationb) Modification:
4.	In addition to provisions for general education, the program of the secondary school should include not only college-preparatory work but also special opportunities for effective preparation for education beyond the high school that leads to entering employment.
	a) Consensus position: Agree; Disagree; Agree, with modification b) Modification:
5.	In most curricular areas, classroom instruction should place major emphasis on active student involvement in such activities as problem solving, investigative procedures, exchange of ideas, planning, and evaluation as effective procedures in learning.
	a) Consensus position: Agree; Disagree; Agree, with modification b) Modification:
	Other statements may call for an expression on such issues as the relative emphasis to be placed on the

Other statements may call for an expression on such issues as the relative emphasis to be placed on the humanities and sciences, the extent to which conceptual structuring should be employed in instruction, the degree of emphasis to be placed on the deductive approach, and basis for student evaluation and promotion. If this approach of formulating position statements is used, the most beneficial result would be a summary statement, based on the philosophical statements previously formulated, that produces guidelines for direction and emphasis in specific areas of the educational program.

II. PROCEDURES FOLLOWED IN DEVELOPMENT OF PHILOSOPHY AND OBJECTIVES

In practical effect on the school program, the procedures followed in arriving at a formulation of philoso-

indicate the procedures used by this school in developing its philosophy. The questions which follow are intended merely to be suggestive. Any significant activities in the study and development of the philosophy and objectives should be described and included.
1. Who were involved in formulating the statements presented in Part I of this section?

2.	How	did	the	staff	participate	in	discussion	and	development	of	the	statement	ts?
----	-----	-----	-----	-------	-------------	----	------------	-----	-------------	----	-----	-----------	-----

- 3. How recent are the statements of philosophy and objectives? Are they revisions of former statements or impletely new statements?
- 4. What sources and materials for study and discussion were most helpful in developing the statement of philosophy and objectives?

III. COMMENTS ON THE SCHOOL'S STATEMENTS OF PHILOSOPHY AND OBJECTIVES

(Space is provided below for comments relevant to the statements of philosophy and objectives.)

Curriculum

NAME OF SCHOOL	 DATE
Self-evaluation by	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Although the term "curriculum" may be interpreted to include all constructive learning experiences provided under the direction of the school, it is used here to designate those activities, both formal and informal, carried on in relation to planned courses of instruction. It functions through learning experiences and instructional materials from various fields of knowledge. Attempts are made to provide learning experiences that meet not only the general needs but also the specialized needs related to the unique abilities, interests, and expectations of each individual.

Instructional activities are planned to develop knowledge, understanding, attitudes, ideals, habits, and skills that are appropriate to a full life in American society. Sound teaching techniques are developed in relation to established theories of learning, new media, and recent research. It is imperative that all teachers make provisions for individual differences among students. Students are encouraged to assume as much responsibility for advancing their own learning as their maturity permits.

Continuous evaluation of the curriculum is needed to determine the degree to which the instructional objectives are being achieved, as well as the appropriateness of the curriculum design. The procedures for developing improvements in the carriculum should be flexible and should encourage change and innovation where appropriate. Professional leadership, widespread faculty involvement, and adequate material resources assure a commitment to continuous evaluation and improvement of the curriculum.

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

III. CURRICULUM DEVELOPMENT PROCEDURES

Curriculum development activities include both those conducted within the school and those of larger educational units, such as city, district, county, and state agencies, when these contribute to the development of the school's curriculum. All of these activities should be considered in the checklists and evaluations of this division.

Checklist

2.	Curriculum development procedures include analysis of student needs, community needs, and the relationship of these to needs of the total society. The local staff members make use of national, regional, and state resources for curriculum development. All staff members have the opportunity to participate in curriculum development processes that include consideration both of sequential progression	na 1 2 3 4 na 1 2 3 4	 12. Provision is made for interdisciplinary communication leading to coordination, integration, and articulation of subject areas. 13. Curriculum development provides for the incorporation of new knowledge of learning procedures. 14. Curriculum development procedures include the use of (place a check in front of those used): Follow-up studies of all students 	na 1 2 3 4

Supplementary Data

1. Indicate your organizational pattern and procedures for curriculum development.

Evaluations

a) To what extent has the staff participated in curriculum development?	. na 1 2 3 4
b) To what extent are resources such as materials and specialists available for use in curriculum study	? na 1 2 3 4
c) To what excent are resources such as materials and specialists used in curriculum study?	na 1 2 3 4
d) To what extent do curriculum development procedures recognize the needs of students and the com	2-
munity served?	. na 1 2 3 4

IV. EVALUATIVE PROCEDURES

In this section, the methods of evaluating the curriculum are to be summarized.

1.	What procedures does the school use to evaluate the total curriculum in light of the objectives stated in Section 3, "Philosophy and Objectives"?
2.	How well are stated objectives being met as determined from observed student behavior?
3.	How and to what extent does the staff acquire knowledge of the characteristics of individual students (e.g., through the results of standardized tests; studies of interests, attitudes, peer group relations, family background, and future plans)? How does the staff use such information?
4.	Describe the achievement testing program of the school and how it is used to evaluate and improve the curriculum.
5.	a) What follow-up studies of former students (graduates and dropouts) are currently being conducted?
	b) Attach outlines of recently completed follow-up studies and summarize briefly significant findings as they relate to the curriculum.
	c) Outline projected follow-up studies.

IV. EVALUATIVE PROCEDURES—Continued

ow do organizational devices such as the master schedule, individual student schedules, and course outlines reflect aff efforts to implement objectives of the school's curriculum?
How do students participate in evaluative procedures?
How are the students and parents kept aware of student progress?
How and to what extent are all teachers involved in evaluating the broad objectives and design of the school's curriculum?
How do teachers evaluate the effectiveness of their own teaching?
What methods other than the above are used to evaluate teacher effectiveness?
Continued on next page

IV. EVALUATIVE PROCEDURES—Continued

SECTION

Agriculture 4-1

NAME OF SCHOOL	 	DATE	
Self-evaluation by			

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Vocational-technical instruction in agriculture should effectively and efficiently lead interested youth and adults to acquire knowledge, skills, attitudes, and abilities that provide preparatory education for purposeful employment and supplementary education for advancement in agriculture and agriculture-related occupations. Inasmuch as farming—agricultural production—is only one aspect of the broad field of agriculture, the word "agriculture" is used in this section to include the many facets of activities that encompass the agricultural economy. Seven major program areas for which instruction may be provided are: (1) agricultural production, (2) landscape horticulture, (3) agricultural mechanization, (4) agricultural products, (5) agricultural supplies, (6) agricultural resources, and (7) forestry.

Admission of a student to the program should not be restricted by his intellectual abilities or his socioeconomic level. Nor should the time required for instruction re-

strict the enrolled student's right to elect courses outside the agriculture program that are prerequisite to college entry. In the general education phase of the program, students explore the field without necessarily planning to work in agricultural occupations. The objectives of instruction should be clearly defined.

The program of agricultural education is both in line with the school's philosophy and objectives and based on careful analyses of the needs of students, the community, the state, and the nation. The program is a cooperative enterprise using both the facilities of the school and the resources of the area. A desirable balance is maintained among the instructional activities in conformity with the school's offerings and the individual student's needs and capabilities. The courses of study are structured to permit students to elect units of instruction in different departments that will lead to occupational proficiency.

NOTE: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the agriculture department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- i Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

There should be some evidence indicating that the influence of the art program is felt by the entire student body. The program is to be thought of as more than courses and activities confined to an art workroom. Art can challenge the creative power of all students. It will seek to have all students know of the relationship of art to every important aspect of daily living. Art can help all students: to develop a keener awareness of aesthetic values; to develop manipulative and

organizational skills in expressing ideas, feelings, and moods; to explore personal interests and aptitudes; to acquire a knowledge of man's visual art heritage for the purpose of building an understanding of our culture in relation to other times and places; to become involved in and respond to visual art experiences; to make sound visual judgments suited to their maturity level; to develop sensitive discrimination in the use of art at home, in school, and in the community.

NOTE: Before proceeding with work on this section, prepare and attach as part of the section a list of the major goals of the art program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are emitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most derirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics

VII. GENERAL EVALUATION OF INSTRUCTION IN ART

Evaluations

Business Education

NAME OF SCHOOL	 DATE
Self-evaluation by	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Business education includes courses and activities designed to prepare all students for satisfactory adjustment to a complex economic society and to provide specialized vocational training for those students who expect to seek employment in business.

Basic business education provides for the development of knowledge and skills that will permit students, regardless of professional or vocational goals in life, to manage their personal business affairs and to participate intelligently in the resolution of economic problems which continually confront members of our society. The content of courses in this category is determined by the economic activities and the business problems common to most citizens.

Vocational business education is designed for students who have an aptitude for and an

interest in specialized training that is devised to equip them for success in business occupations. Since the content of vocational courses is determined by the constantly changing demands of business, the skills and knowledge that should be developed are established by continuing surveys of employment opportunities and analyses of duties performed by business employees. Students are equipped with skills, knowledge, habits, attitudes, and ideals essential for achieving success in initial employment and for advancement to responsible positions. Capable and interested students are assisted in planning and preparing for additional education essential for entrance into specialized vocational positions and the assumption of management responsibilities.

NOTE: Before proceeding with the work on this section, prepare and attach as part of the section a list of the major goals of the business education program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA
Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2

Cornments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

1.	Basic	business	courses	such	as	general
	busine	ess, consu	mer ecor	omic	s, a	nd busi-
	ness la	aw are av	ailable t	o all s	tud	ents.

- 2. Vocational business education is available to all students who need and can profit from it.
- 3. Typing instruction for personal or vocational use is recommended to all students.
- 4. Work experience is provided for students preparing for emp:oyment in office positions.
- 5. An advisory committee, representative of local business, assists in determining training needs and in coordinating the vocational and nonvocational phases of business education.
- 6. The school schedule is so designed that any student may take basic business courses during his school career.
- 7. Such factors as results of prognostic tests and success in English and typing are considered in advising students who wish to elect stenography.
- 8. Supervision of instruction is provided by the business education department.
- 9. The business education department accepts work originating outside the department *only* when such work contributes to instruction.
- 10. Class size is determined by such factors as type of instruction and availability of work areas.

11.	Provision	is	made	for	helping	in	the
	placement	of	gradua	tes.			

- na 1 2 3 4

 12. Specific provision is made in course offerings to meet the needs of students who wish to develop business skills and acquire a knowledge of business principles for their personal use.
 - 13. Sufficient vocational courses are offered to permit students to elect to prepare for employment from among stenographic, general clerical, bookkeeping, and data processing occupations.
 - 14. Club activities related to the field of business are available to students.
 - 15. Vocational business course offerings provide both terminal training and specific preparation for further highly specialized vocational training.
 - 16. Teachers from the various grade levels plan together to develop a sequential program in business education.
 - 17. Teachers of the same grade level plan together to develop the business education program at that level.
 - 18. Department objectives are stated in terms that are behavioral and measurable, in keeping with the diverse nature of business.
 - 19. Provision is made for independent study of business.
 - 20. na 1 2 3 4

Distributive Education

NAME OF SCHOOL	-	DATE
Self-evaluation by		

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Distributive education provides instruction designed to prepare students for work and further study in the field of distribution—the marketing and merchandising of goods and services. Distribution is the area of the .onomy that adds time and place utility to goods and services. Efficient marketing and merchandising activities enable the consumer to obtain readily the goods and services that are available.

The program in distributive education presents the place of distribution in the economy, the organization of marketing and mer-

chandising activities, and the knowledge, skills, and attitudes needed by persons engaged in distribution, particularly beginning workers. The program is a cooperative enterprise using both the facilities of the school and the marketing and merchandising resources of the community. Instruction in the school is supplemented by supervised occupational experience provided by cooperating business or by occupationally oriented experiences that are planned and conducted by the school.

Note: Before proceeding with work on this section, prepare and attach as part of the section a list of the major goals of the distributive education program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Driver and Traffic Safety Education

NAME OF SCHOOL

DATE

Self-evaluation by

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Driver and traffic safety education involves all those learning experiences provided for the purpose of helping students learn to use motor vehicles safely, efficiently, and effectively. This purpose is achieved through sequences of interrelated experiences involving both classroom and laboratory instruction.

Classroom instruction deals with driver behavior and physical characteristics (reaction time, sight and its limitations, effects of use of alcohol and drugs, etc.), the motor vehicle in modern life, rules of the road, laws of physics related to driving, the automobile and its maintenance, good pedestrian practices, the development of driving skills, perceptual abilities, and attitudes.

Laboratory instruction includes teacher demonstrations and student practice in starting, steering, shifting gears, making turns, stopping, backing, and parking. Beginning under simple conditions, instruction progresses until the student acquires good habits of observation and reasonable skill in driving (1) on urban streets and open highways with efficiency, poise, and confidence; (2) in accord with rules of the road and with laws of physics related to driving; and (3) in a manner that indicates a desire on the student's part to show courteous consideration for other street and highway users and for the occupants of his vehicle.

NOTE: Before proceeding with work on this section, prepare and attach as part of the section a list of the major goals of the driver education program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of gaiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are it the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, 'Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this cale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Checklist

- 1. One staff member is charged with the responsibility of coordinating and supervising the driver and traffic safety education program.
- 2. The school master schedule includes provision for both classroom and laboratory instruction.
- 3. Information on serious physical or psychological factors provided by the guidance department or parents is carefully reviewed before the student is permitted to enroll in laboratory instruction.
- 4. Provisions are made for staff members to plan the instruction program cooperatively.
- 5. The program is so organized that all eligible students may enroll and receive instruction.
- 6. Laboratory instruction is given only to students who have had or are currently receiving classroom instruction.
- 7. Classes are scheduled for a sufficient number of periods per week for classroom instruction and laboratory instruction (should at least meet or exceed minimum state requirements and nationally recommended minimum).
- 8. Records and reports are maintained to protect students and school personnel in case of liability.

- 9. The record kept on each practice car includes the amount and cost of insurance, time vehicle has been used, mileage devoted to laboratory instruction, details of servicing and repairs, and consumption of fuel.
- 10. Driver and traffic safety education is scheduled independently so that students are not taken from other subject area classes to receive laboratory instruction.
- 11. After-hours instruction is available for those students who cannot arrange for it during the regular school day.
- 12. Provision is made for instruction in the safe operation of two-wheeled motorized vehicles.
- 13. Parents receive written communication concerning the nature of the course, student progress, legal responsibilities, and the need for school-parent cooperation.
- 14. Provisions are made for establishing and maintaining a good working relationship with local public efficials who have responsibilities for traffic.
- 15. The school has a set of written policies and practices to use as guidelines for organization, administration, and supervision of safety education.

D. METHODS OF EVALUATION

Checklist

 3. 4. 5. 	Evaluation is an integral part of instruction. Evaluation is used to help determine the appropriateness of objectives and the soundness of administrative policies. Various diagnostic tests are used to determine readiness to learn specific tasks and to point out areas for improvement. A variety of evaluative techniques are used, such as written driving skill, psychophysical, and attitude tests; observations of student behavior; ratings by teachers; anecdotal records; student appraisals. Permanent school records include information on achievement in driver and traffic safety education.	na na	1 2	3 4	4 :	7.	Outcomes of evaluation are used in revising the program and in planning the teaching-learning activities. In evaluating student performance, particular care is taken to reduce or to avoid tensions that may increase the hazards of the situation. The school endeavors to include in its evaluation of the driver and traffic safety education program the opinions of graduates, parents of present or former students, traffic court judges, police officials, and insurance company officials.	na	1	2	3	4
	aluations											
	How adequate are the evaluation procedure							na	1	2	3	4

Self-evaluation by		

GUIDING PRINCIPLES

These principles are offered for your accentance, rejection, or modification. Please feel free to make changes.

The English program is designed to improve the student's awareness of the important role that the English language and its literature play in his life and of their uses in public and private discourse. Essential to the over-all program of studies, the English program emphasizes the development of the powers of comprehension, of critical thinking, and of coherence, cogency, and fluency in the expression and communication of ideas through oral and written composition. At the same time it is designed to provide experiences and activities, particularly in literature, that will help the student become a discriminating reader and will promote life-

long learning. In his reading, he will encounter human aspirations, foibles, courage, cowardice, vulnerability, nobility of character, and integrity that should contribute to his own emotional and spiritual maturity. He should be led, through his studies, to develop a sense of responsibility for faithfulness to purpose of his statements and for their accuracy.

Literature that has been selected for its richness of texture and its excellence of content and style will promote growth in imagination and aesthetic appreciation, as well as provide enjoyable leisure-time activities.

NOTE: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the English department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and . mulation to improvement—should be kept in mind. Carefu, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

'The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should he kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

105

Checklist

 The study of literature is planned to provide for students' growth in: a) Awareness of the major themes and ideas that pervade great literature. b) Appreciation and enjoyment of literature. c) Insight into human experiences. d) The skills of reading literature. Although American and English literatures are emphasized, opportunities are provided for the study of appropriate selections from other literatures. Students study intensively major works, contemporary as well as classic, chosen carefully for their appropriateness to student abilities, interests, and maturity. Major works are selected on the basis of their enduring qualities as literature. Paperback and supplementary hardback books, magazines, and newspapers are used extensively. A variety of materials and instructional procedures provide for individual differences within a class group. 	na 1 2 3 4 na 1 2 3 4	 Specific instruction is provided in reading different types of literature: novels, biography, short stories, essays, plays, and poetry. In accordance with their maturity and experiences with literature, students are guided to develop a variety of critical approaches to literature and its evaluation. Provision is made for the study of works of literary merit through the use of such media as films, radio, television, and recordings. Students learn something of television, film, and stage as arts distinct from literature. The use of library and reference resources is taught in relation to needs. 	na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4

Foreign Languages 4-7

NAME OF SCHOOL	DATE
Self-evaluation by	
	This evaluation includes:

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The foreign language program in today's schools may include both classical and modern languages. The languages to be taught are selected after considering their educational value, the cultural insights to be gained from them, and, where applicable, their vocational use, the extent of their use by the peoples of the world, and the potential contribution to our society of a working knowledge of them.

It is desirable for students to gain an understanding of the linguistic and cultural heritages of our country derived from both the Eastern and Western hemispheres, and from Latin and Greek, in order to gain a better understanding of our own culture and of the problems of concern to our country.

Now and in the foreseeable future, our society sorely needs many people who can use a foreign language adequately. Some scientific concepts, psychological insights, cultural analyses, and writing about economics that are necessary to our progress as a people and as a society are available only in foreign literature.

The study of a foreign language is a pro-

gressive experience and implies progressive acquisition of linguistic skills. Skills grow rusty with disuse; but when learned thoroughly and with understanding, they can be reactivated quickly, given the proper stimuli and environment. The values to be gained from language learning will be related to the amount of time and effort devoted to it and to the learner's motivation.

Skills to be mastered include: (1) increasing ability to understand the foreign language when spoken, (2) increasing ability to speak it, (3) ability to read it with increasing ease and enjoyment, and (4) the increasing ability to write it. The acquisition of these skills will result in a new understanding of the concept of language.

The study of another language usually brings about a gradually expanding and deepening knowledge of the country or countries-people, geography, history, social institutions, literature, and culture—and, as a consequence, a better perspective of our own culture through adjustment to the concept of cultural similarities and differences.

Note: Before proceeding with the work of this section, prepare and attach as part of the section a list of the major goals of the foreign language department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of gaiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives." should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise to show a trait that is less than good, but better than poor, circle the number 2.

Let us con. Ider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- 1. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. ORGANIZATION

Checklist

- 1. Foreign language courses are available to all students.
- 2. Course counseling is provided by staff members acquainted with foreign language education.
- 3. Class size is limited so that each member participates in some type of oral activity daily.
- 4. Such factors as interest, motivation, and the discriminating use of aptitude tests are employed to encourage students to elect foreign languages.
- 5. Opportunity is provided for a four-year sequence in at least one foreign language.
- 6. A carefully articulated language program is provided from elementary through senior high school.
- 7. More than the usual four-year sequence of language study is provided for those who began study of a foreign language in elementary school and are continuing its study in high school.
- 8. Language programs of students are planned to avoid a gap between the end of foreign language study in high school and its continuation in college.

- 9. Supervisory assistance is provided to coordinate the foreign language program.
 - 10. All foreign language teachers are encouraged to aid in the development of the foreign language curriculum.
 - 11. Students pursue the study of one foreign language for a longer sequence of time (three or four years) rather than studying two languages for shorter sequences, say, of two years each.
 - 12. A minimum sequence of three years of one foreign language is offered before additional languages are added to the program.
 - 13. Individual instruction or special classes are available to the gifted student.
 - 14. Teachers at the same grade level plan together to develop the foreign language program at that level.

Seli-evaluation by		

GUIDING PRINC!PLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Health education provides opportunities for students to develop knowledge, attitudes, and practices necessary to meet the present health needs of youth and society. It also provides an opportunity for students to develop a concept of health which will be functional in the future.

Health education should be offered through separate courses, that are centered on the individual and his relationship to environment, family, and society, and are focused on those behaviors required to achieve a level of well-being that is necessary for optimum functioning. The criteria in this section are formulated for health education courses organized as separate subject areas of instruction.

In some schools, instruction in health is integrated with other subject areas. In such cases, the Health Education section should be modified to reflect the integrated program.

The consideration of health subject matter as part of other subject areas does not provide for the development of the breadth, depth, or sequence necessary for the health education program to achieve its purposes. However, the relationships between health and other curricular areas should not be neglected.

NOTE: Before proceeding with the work of this section, prepare and attach as part of the section a list of the major goals of health education that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Nor applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommitted members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Self-evaluation by	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

A vital home economics program is concerned with guiding all students to develop attitudes, appreciation, understanding, and abilities necessary for achieving satisfying personal and family living. Further, it prepares some youth and adults for employment in occupations related to home economics.

Because every person's contributions to the greater society depend heavily on his early "family" experiences, education for home and family life needs to be a quality program available to all students sometime during their school career. No matter what the interests, intellect, education, or family background of a person is, his success, satisfactions, and growth toward maturity will depend largely upon his ability to relate to others, to set realistic goals for himself, and to use resources available to him to achieve these goals. For these reasons, if the home economics curriculum is to be vital, the selection of offerings must have its basis in research and must focus on principles and ideas that tend to strengthen individuals and families.

Modifications in the roles of men and women in regard to the home make it desirable for male students as well as women and girls to receive education for home and family life so that all members of the family may carry their responsibilities effectively. With more and more women engaging in gainful employment, they need preparation to function effectively in dual roles in homemaking and employment. As societal forces create changes in homemaking, the emphases in home economics programs must be revised and refocused.

The most meaningful experiences in home economics education are those that are correlated and integrated with the home and community life of students. Teachers can help keep programs attuned to the needs and interests of students through cooperative planning with students, administrators, other teachers, and parents and other members of the community, and through recognition of the diversity and differences among learners.

In order for home economics education to be meaningful, its goals must be realistic and the ideas carefully selected. A variety of learning experiences must be offered; the sequences of learning must be carefully planned and articulated from level to level: and multisensory experiences must be geared to individual differences among students. In an environment of inquiry conducive to independent thinking, students will be directed toward grasping concepts and will become prepared to make intelligent choices and to develop skill in applying principles and generalizations to new situations.

Home economics programs are vital when they are characterized by creativity, flexibility, and respect for human values. Although there will be considerable similarity among programs, they should allow each student equal opportunity to develop his own interests and potential with the resources available to him.

NOTE: Before proceeding with work on this section, prepare and attach as part of the section a list of the major goals of the home economics department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 1. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. Checklist

- 1. Offerings in home economics are adequate in number and open to all students.
- 2. Class size is regulated by the needs and objectives of individual classes.
- 3. Provision is made for flexible class structuring and teaching organization.
- 4. The teacher has sufficient released time for in-service education and work with individual students.
- 5. Provision is made for coordination of subject matter with other departments.
- 6. The Future Homemakers of America or other related organizations are an integral part of the program.
- 7. Contacts with homes and parerts are effected to enrich home-school relationships.
- 8. Various means are employed to disseminate information about the home economics program to the community.
- 9. Teacher aides and professional personnel are available to assist classroom teachers.

- 10. A committee composed of such people as a school administrator, a guidance counselor, a parent, teachers of home economics, and representatives of agencies and business serves in an advisory capacity.
 - 11. Funds are provided for extraclass needs, including purchase and maintenance of equipment and development of new programs.
 - 12. Within the department, a budget and record of expenditures for purchase and maintenance of equipment and for supplies is maintained.
- 13. Teachers from the various grade levels plan together to develop a sequential program in home economics.
- 14. Teachers of the same grade level plan together to develop the home economics program at that level.

na 1 2 3 4 na 1 2 3 4

Supplementary Data

1. Fill in the following table for all courses in home economics.

				REQUIRED	RANGE OF	Per V	Veek
TITLE OF COURSE	GRADE	ENROLL- MENT	Number of Sections	OR ELECTIVE	RANGE OF CLASS SIZE	Number of Periods	Total Minutes

2. Comment on enrollment trends over the last five years in this department.

Evaluations

- a) To what degree is the over-all home economics program organized to be of maximum benefit to all students?
- b) To what degree are time, space, funds, and equipment available to, and used with maximum efficiency by, the teachers and administrators?

II. NATURE OF OFFERINGS

D. METHODS OF EVALUATION

Checklist

 Evaluation is based on the objectives of the course. Evaluation is an integral part of the teaching-learning process. Evaluation is composed of written and oral, subjective and objective means. Evaluation is designed to assess both teaching and learning. Students participate in evaluating their own progress. Teachers help interpret evaluations to parents. Representatives of business and institutions participate in the evaluation and interpretation of progress made in the work experiences of students. Evidence of individual progress is re- 	na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4	 10. Interpretation of the results of evaluation is used by the students and teacher to: a) Guide planning for next steps. b) Diagnose student strengths and weaknesses. c) Determine growth of individuals in relation to objectives of the course. d) Share with guidance counselors and other personnel additional informamation from the home economics department. 11. Provision is made for some follow-up of students to determine the effectiveness of the program for home and family living, job placement, and career success. 	na na na	1 3	2 3 2 3 2 3	4

Industrial Arts 4

NAME OF SCHOOL	DATE
Self-evaluation by	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The industrial arts curriculum consists of units of instruction designed to meet those student needs that are related to the industrial sector of the American economy. For all students, both boys and girls, the industrial arts curriculum offers orientation to an industrial environment, occupational information, opportunity for the development of consumer knowledge and skills related to industry and industrial products, and a variety of leisure-time pursuits to meet particular interests and needs that are important in our modern technical society.

Emphasis in instruction is placed on social and personal needs related to the use of industrial goods and services in the home and community. Industrial arts activities are, in general, exploratory in nature and continue to be so until students require more specialized training in vocational trade and industrial education.

If satisfactory vocational facilities are not available, the industrial arts department may assume some responsibility for this specialized training.

Note: Before proceeding with the work on this section, prepare and attach as a part of the section a list of the major goals of the industrial arts department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of thecklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists cc evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments. it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. ORGANIZATION

Checklist

 The program of industrial arts education is available to all students as an elective. Specific industrial arts objectives or goals are identified with each course of- 	пα	1	2	3	4
fering.	na	1	2	3	4
3. The industrial arts program is so organized that it can be adjusted to the demands of new situations.4. Industrial arts facilities are available to	пα	1	2	3	4
students, under proper supervision, out- side regular class time.	па	1	2	3	4
5. Class periods are of sufficient length to produce progress in learning.	na				
6. Class size is determined by such factors as type of activity, available space, and safety of students.7. The school budget provides adequate	na	1	2	3	4
funds to support all elements of the industrial arts program. 8. Program development is a cooperative endeavor involving administrators, supervisors, teachers, and lay people. Teachers and students work together in	па				4
planning on the classroom level	na	ı	2	3	4

9. The industrial arts program is coordinated with other courses.	na 1 2 3 4
10. Staff members cooperate with the public relations efforts of the school.	na 1 2 3 4
11. Repair and production jobs are permitted in the industrial arts program only if they are desirable educational	
experiences for students.	па 1 2 3 4
12. A daily nonteaching, conference period, free from regularly assigned duties, is provided for each teacher carrying a full	
schedule of classes.	na 1 2 3 4
13. Occupational information and guidance are an integral part of the program.	na 1 2 3 4
14. Teachers of the various grade levels plan together to develop a sequential program in industrial arts.15. Teachers of the same grade level plan to-	na 1 2 3 4
gether to develop the industrial arts program at that level.	na 1 2 3 4

Evaluations

a	To what extent are the information and experiences offered in the program related to modern industry?	na	ì	2	3	4
b)	To what extent are scope and sequence of courses related to the interests, abilities, and developmental					
	needs of students?	na	1	2	3	4
c)	To what extent do the offerings provide for exploratory or tryout experiences with a variety of tools.					
	materials, and industrial processes?	na	1	2	3	4
d)	To what extent do students understand labor-management problems?					
	To what extent is student responsibility and leadership developed?	na	1	2	3	4
	To what extent is the program flexible to meet the needs of all students?					

16. School shop contains a convenient and

III. PHYSICAL FACILITIES

Checklist

Checklist	
1. Facilities are appropriately located as a unit for students as well as for adult	1004
evening classes. 2. Total floor area is consistent with ac-	na 1 2 3 4
cepted standards. 3. Natural light is effectively controlled to eliminate glare. Sufficient supplemental	па 1 2 3 4
 artificial light, properly diffused and distributed, is provided. Local lighting is provided in critical work areas. 4. Floors are in good condition and are suited to the area in which they are located; precautions are taken against 	na 1 2 3 4
slippery floors, special attention being given to machine areas. 5. Facilities for heating, ventilation, and	na 1 2 3 4
air conditioning commensurate with good working conditions are available. 6. Exhaust ventilation equipment is available.	na 1 2 3 4
able in areas where excessive heat, fumes, gases, and dust are produced. 7. Where needed, properly designed and lo-	na 1 2 3 4
cated gas, water, electrical, and compressed air facilities are provided. 8. Each school shop facility has a minimum	na 1 2 3 4
of two entrance-exit doors that each measure 36 inches or more in width. 9. Ceiling height is appropriate, i.e., be-	na 1 2 3 4
 tween 12 feet and 14 feet in all school shops and drawing rooms; and where applicable, ceilings are constructed of a material having a high coefficient of sound absorption. 10. A ventilated fire-resistant cabinet is provided for the storage of combustible materials. A metal, self-closing container is 	na 1 2 3 4
provided for soiled rags. Each shop is equipped with appropriately located fire extinguishers of the correct type and size. 11. Shop walls are durable and easily cleaned from floor to top-of-door height. Sound-absorbing materials are used on upper wall surfaces wherever the	na 1 2 3 4
amount of noise suggests special wall treatment. 12. Washing facilities and drinking foun-	na 1 2 3 4
tain of appropriate design and location are provided.13. Display case of a sufficient size, properly	na 1 2 3 4
lighted and appropriately located, is provided. 14. Convenient office or desk space is pro-	na 1 2 3 4
vided. 15. A filing space is located near the instruc-	na 1 2 3 4
tor's desk and is adequate for all necessary records, pamphlets, and illustrative materials.	na 1 2 3 4

16.	School shop contains a convenient and					
	centrally located tool and supply center and, where applicable, an adequate num-					
	ber of well-laid-out tool panel areas for					
	special tools.	na	1	2	3	4
17	Principles of "color dynamics," with		·	_	-	
	moderation, are followed throughout					
	each of the shops and on equipment.	na	1	2	3	4
18	Safe storage is provided for all supplies;					
10.	storage area accommodates full-length					
	stock and all materials.	na	1	2	3	4
19	Adequate storage areas are provided for					
~0.	student projects under construction as					
	well as for articles in the assembling and					
	finishing stages.	na	1	2	3	4

Mathematics

Self-evaluation by	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The secondary school mathematics curriculum consists of those courses, units of instruction, and activities designed to contribute to both the common and special mathematical needs of secondary school students. The curriculum places the proper amount of stress on developing (1) accuracy and facility in performing fundamental mathematical operations, (2) ability to analyze and solve problems of a variety of types and varying degrees of difficulty, and (3) an

understanding of the nature and structure of mathematics so that students will be able to apply the basic principles to entirely new areas. The curriculum includes concepts and processes of modern mathematics upon which technical and scientific progress depends. Provisions are made for students to develop competence in such aspects as proof, organization of data and other information, and drawing of conclusions, both specific and general.

NOTE: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the department of mathematics that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. ORGANIZATION

Checklist

 A minimum of one year of study in mathematics is required. Courses in mathematics are provided for 	na	1	2	3	4
all students.	na	1	2	3	4
3. Courses are available throughout the secondary school program to suit the student's ability and to meet his aca-					
demic and vocational needs.	na	1	2	3	4
4. Provision is made to prepare students to enter college with advanced standing in					
mathematics.	na	1	2	3	4
5. Provision is made for the transfer of students from one ability grouping to			_		
another.	na	1	2	3	4
6. The mathematics curriculum emphasizes general principles, ideas, and techniques that have wide application and educational value.	na	1	2	3	4
VRVAIWA TITTE					

7. Provision is made for students to pursue independent study.8. Individual instruction or special classes	na	1	2	3	4
	na	1	2	3	4
9. Teachers from the various grade levels plan together to develop a sequential pro-			•	•	,
gram in mathematics.	na	ı	2	3	4
10. Teachers of the same grade level work together to develop the mathematics pro-					
gram at that level.	na	1	2	3	4
11.	na	1	2	3	4

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The primary purpose of the secondary school music curriculum is to continue a program of music education that makes a major contribution toward developing cultural and aesthetic values for all high school students. Such values are taught through music courses and through interdisciplinary instruction to enrich other phases of the curriculum in which music plays an important part. Such instruction includes the most common basic elements that are best learned in school.

The program provides a variety of musical experiences, with emphasis on the study and performance of selected musical litera-

ture representative of a wide range of periods, styles, nationalities, forms, composers, and media. Community music resources and activities are brought to the attention of students and direct participation is encouraged.

A strong music program has as a goal the discovery and development of aptitude and subsequent encouragement to further study. The individual student should be provided an opportunity and be encouraged to develop his musical talents to their fullest possible potential. Fundamentally, the program should increase the student's understanding of the art of music and its place in contemporary life.

Note: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the music department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor. circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are n ϵ good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. ORGANIZATION

Checklist

1. All students have the opportunity to participate in formal music courses and					
musical groups.	na	1	2	3	4
2. Music offerings that carry credit are included in the regularly scheduled school					
day.	na	1	2	3	4
3. Opportunities are provided for solo and					
small ensemble experience.	na	1	2	3	4
4. The school's scheduling procedures permit students to participate in perform-					
ing groups.	กฉ	1	2	3	4
5. Cooperation with community music or-					
ganizations is encouraged.	na	1	2	3	4
6. Talented students may elect courses to					
form a major sequence in music.	na	1	2	3	4

7. The music faculty participates in the planning and teaching of interdisci-					
plinary courses.	na	1	2	3	4
8. Teachers from different grade levels plan together to develop a sequential program					
in music.	na	1	2	3	4
9. Teachers of the same grade level plan together to develop the music program at					
that level.	ពីជ	ì	2	3	Ž
10. Individual instruction or special classes					
are available to the gifted student.	na	1	2	3	4
11.	na	1	2	3	4

Supplementary Data

1. Fill in the following table for all courses in music.

		Enroal-	NUMBER OF	Required	Daver or	Per Week

Evaluations

a)	To what degree are listening skills and an appreciation of music being developed in all students?	na	1	2	3	4
b)	To what degree are students developing their ability in vocal music?	na	1	2	3	4
c)	To what degree are students developing their ability to play stringed instruments?	na	1	2	3	4
d)	To what degree are students developing their ability to play wind and percussion instruments?	na	1	2	3	4
e)	To what degree are students developing creative ability in music?	na	1	2	3	4
f)	To what degree are the talents of gifted students being developed?	na	1	2	3	4
a i	To what extent is the curriculum adequate to accomplish the objectives of the music program?	na	•	2	3	4

VI. SPECIAL CHARACTERISTICS OF THE MUSIC PROGRAM

1. In what respects is the music program most satisfactory and commendable?

2. In what respects is the music program most in need of improvement?

3. Recommend, i.: order of priority, steps for the improvement of weaknesses in the music program.

VII. GENERAL EVALUATION OF INSTRUCTION IN MUSIC

Evaluations

a i	To what extent does the instruction in music meet the needs of students as indicated in Section 2,					
	"School and Community"?	na	1	2	3	
۸,	To what extent is the instruction in music consistent with the philosophy and objectives as developed					
	in Section 3, "Philosophy and Objectives"?	ກα	1	2	3	
c,	To what extent is the school identifying problems in music instruction and seeking their solution?	na	1	2	3	

Physical Education

NAME OF SCHOOL	DATE
Self-evaluation by	
	T1.
	This evaluation covers the physical education program:
	For boys and girls For boys For girls

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The physical education program consists of those courses and activities designed to help meet physical and recreational needs of all youth. The physical education program is interpreted as including the required class instruction, intramural and interscholastic programs, and other related physical recreational activities. Information about the abilities, interests, and health status of the boys and girls is gathered and used in planning a balanced program and in adapting the activities to the needs of the individual students.

Best results are obtained when all these activities are administered under the direction of qualified physical education personnel. Provision for such administration includes: (1) articulation of the required class instruction and intramural and interscholastic athletic programs; and (2) use of sound educational principles in the conduct of all aspects of the program.

The comprehensive goals of the program emphasize the mental, emotional, and social aspects of living, as well as the physical developmental aspects necessary for a satisfying and active life. The program emphasizes the relationship of physical activity and of conceptual development to the chronological age and physical and mental maturity of youth.

Both present and future physical and recreational needs of students are met: (1) through participation in a wide variety of physical activities that will lead to the development of coordination, strength, skill, and endurance; (2) through participation in a variety of physical activities having continuing lifetime values; and (3) through experiences designed to develop knowledge, understanding, and attitudes which would result in desirable practices necessary to maintain physical, social, emotional, and mental health.

NOTE: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the physical education program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives"). Where it is felt that two separate programs are in effect, evaluations may be made for each, using a separate form for boys and another for girls.

INSTRUCTIONS

General

186

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Religion Section

IVAME OF SCHOOL	DATE	
Self-evaluation by		

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The study of religion, by its very nature in the American academic tradition, is expected to have a permeating and detectable influence on other subject areas and upon the patterns of school life as well as personal and social relations. The total program in religion will, therefore, include the study of God and Man, religious truths and ideals, their realization in action, and the frequent opportunity for participation in religious activities such as worship and service.

Courses taught from a perspective other than that of theistic religion (or of the theistic religious heritage) should be evaluated under the criteria outlined for "Social Studies" or some other appropriate field. Many schools will wish to offer courses to supply knowledge about religion in such areas as history and comparative studies, and about religious themes in literature, arts, social issues, etc. Where it is clear that courses seek to examine the religious understanding and the religious faith of men, they

can be evaluated with this section.

Further, if the trend continues of teaching in public high schools courses that were formerly taught in public institutions at the college level, departments of religion may be established in these high schools. Where such departments develop, they may wish to evaluate themselves under these criteria.

This evaluation is not limited to the bare course offerings but extends additionally to those aspects of corporate life, personal commitment, spiritual growth, sensitivity, and commitment to service that flow from man's response to God. An effective program in religion is enhanced by a continued critical analysis of the influence that the religious commitment has on the total life of the student, the school, and the community.

It should also be stressed that the American pluralistic tradition encourages each school to emphasize, and to develop as responsibly as it can, its own distinctive religious understandings.

Note: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the religion program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of medifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Science Section

NAME OF SCHOOL	 DATE	
Self-evaluation by		
		e die se Michael – Terrendelikaise Michael

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The science curriculum consists of those courses and activities designed to meet the individual student's educational needs related to science. Emphasis is placed on the process of scientific inquiry by students so that they can discover and interpret scientific knowledge, develop desirable attitudes, interests, and appreciation related to science and scientists, and recognize that these behaviors can be applied to the solution of cur-

rent and future problems in a scientific age.

Inquiry is stimulated through various means, using the laboratory as a focal point for learning. There should be provisions for both small-group and individual instruction. Opportunities should be provided for students to apply methods and knowledge of science to inquiry into the solution of problems of society related to science.

Note: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the science department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various is tures of this section are being checked and evaluate. Persons making evaluations should ask: 'How we do the practices in this school meet the needs of the sc. ool and community?" and "How well do the practices con, rm to the philosophy and objectives of the school?" When it is luations are made, factors such as size, type, locat in of school, financial support available, and state requir ments should not be permitted to justify failure to provid a program and facilities appropriate to the needs of he school and community and to the philosophy and discitives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the ramber 3. Likewise, to show a trait that is less than excellent, but better than poor, circle the number 2.

Let "consider an example that will help in understanding "lese directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary 5ata and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings

DATE

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Social studies is the study of man's social relationships in all their variations, both past and present, and draws its substance from the disciplines of anthropology, economics, geography, government, history, - >ciology, and social psychology. Man's physical environment and his psychological and biological make-up are considered to the extent that they help explain these social relationships.

The primary objective of the social studies program is to teach young people to think for themselves and, to that end, to provide them with the concepts and modes of inquiry of the social sciences and history. It also promotes a rational adherence to a set of values based upon the worth and dignity

of each human being, with emphasis upon the examination of values and value conflicts, rather than upon the indoctrination of specific values.

The social studies program is based upon the assumption that the democratic society depends upon citizens who make rational decisions consistent with basic democratic values and who can make such decisions in a context of rapid cultural change, change in which the citizen participates and which he also directs.

The social studies classroom provides an environment in which students can inquire into questions dealing with man's social behavior, an atmosphere in which the search for truth assumes primary importance.

NOTE: Before proceeding with work on this section, prepare and attach as a part of the section a list of the major goals of the social studies department that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

Genera!

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principle and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

DATE

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Special education is generally accepted to mean education designed for, and available to, handicapped children and youth whose educational needs are different in part from those of most of their peers.

In order that every child and youth may have readily available the opportunity for education and training within the limits of his ability, educational systems should incorporate plans to meet diverse needs. Special education is built on the concept of understanding unusual differences among the school-age population and meeting individual needs. In order to help understand the needs of the handicapped and to plan subsequent programs for them, a multidisciplinary (team) approach is often used. This team may call for the services of medical, psychological, social work, educational, and other personnel in order to carry out the work.

Children and youth in need of special education are not limited to specific categories such as the deaf. Rather, they include all those who require unusual curricular or instructional adjustment throughout their school career or some significant portion of it. The handicapped are considered to differ in physical, mental, or emotional characteristics to a degree that school programs designed for the majority of children and youth do not afford them optimum opportunities for maximum adjustment or progress. Therefore, they need special instructional and supportive services to achieve and adjust at the highest level consistent with their abilities.

Special education for handicapped youth is a program that is not entirely different from the education offered others enrolled in the school. It refers to elements of education that are both different from and in addition to the standard offerings. Its integration into regular classes or curricular offerings should be encouraged when appropriate. All programs should be sequential and continuous. Special education should be part of, rather than apart from, the total school program. However, the necessary modifications may, from time to time, appear contradictory to this principle.

Special education services embody three elements worthy of consideration: (1) trained professional personnel, (2) special curricular content for certain handicapped groups, and (3) specialized or modified facilities.

Every student should have an opportunity to complete successfully a program of studies designed to meet his individual needs and abilities. When such a program is completed satisfactorily, he should receive a diploma or certificate comparable to that of other students of the school who have completed their curricular requirements.

NOTE: Before preceding with the work of this section, prepare and attach as part of this section a list of the major goals of the special education program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to we that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Checklist

1.	Policies and procedures for establishing
	and operating special education pro-
	grams are clearly defined and make pro-
	vision for all handicapped students.

2. Special education teachers have a major role in establishing procedures for the identification, evaluation, placement, and transfer of the handicapped.

3. The special education program(s) operates under the leadership of a trained special education administrator.

4. Supervisory services are provided for special education teachers and program.

5. The special education education program is an integral part of the instructional program.

6. The staff is offered the same considerations as other staff members.

7. Opportunities for staff professional development, curriculum development, and in-service training are provided.

8. Budgets for special education programs are formulated as part of the school budget.

9. Appropriate teacher-student ratios are in effect and meet state standards.

10. Teachers are members of an interdisciplinary team that participates in decisions regarding placement, curriculum, evaluation, and instruction.

11. Before a student is transferred to or placed in a special education program. both parents and student receive a complete orientation to the program.

12.	Students are provided special supportive
	services as needed.

13. A systematic plan is in effect for evaluating the quality of special education services.

14. Clerical personnel are available.

15. The school maintains an approved and continuing screening and referral procedure.

16. The school cooperates with professional and lay groups to coordinate activities concerned with the referral of handicapped children and youth.

17. Referrals are made to other agencies to secure diagnostic information.

18. Professional records, including cumulative records, psychological findings, case histories, and medical reports, are available and used by appropriate personnel.

19. Handicapped children in organized programs are re-evaluated at intervals to verify their continued eligibility.

20. Teachers from the various grade levels plan together to develop a sequential program in special education.

21. Teachers of the same grade level plan together to develop the special education program at that level.

III. PHYSICAL FACILITIES

Checklist

- 1. The school facilities are so constructed or modified that individuals having physical handicaps do not encounter architectural barriers which prohibit or limit their use of facilities.
- 2. Instructional areas for handicapped youth are of appropriate size to provide for optimum program development.
- 3. Space is available for special education and supportive services.
- 4. Work and office areas are appropriate in size and shape.
- 5. Each instructional and service area is equipped with the furniture and other equipment necessary for the maximum development of the program.
- 6. The equipment and furniture are aesthetically pleasing, comfortable, and in keeping with the general design of other parts of the school facilities.

- 7. Each instructional and service area has appropriate shelf, storage, file, and display space.
- 8. Special transportation is provided for those students who cannot use regular transportation.
- 9. Transportation is available for field trips.
- 10. Adaptive physical education, recreation, and training facilities and adequate spaces are available both inside and outside the building.

Trade, Technical, and Industrial Education

NAME OF SCHOOL

DATE

Self-evaluation by

Area being evaluated

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The basic purpose of trade, technical, and industrial education for in-school youth is to prepare them for advantageous initial entry into employment in a specific or closely allied trade, industrial, technical, or service occupation. This purpose may be achieved in the secondary school through either a full-time in-school program or a part-time school and part-time employment (cooperative) prog. .m or both. The instructional program is based upon clearly defined skills, proficiencies, and knowledge needed for successful entry into a particular occupational area in which there are opportunities for employment. Only those students who can reasonably be expected to profit by the instruction are selected for enrollment in trade, technical, and industrial education courses. These programs can be conducted in comprehensive high schools, in area vocational schools, or in other types of vocational schools, such as service or skill centers.

The instructional program is conducted

by teachers who are occupationally competent through wage-earning experience in the occupation and who have been given instruction in the techniques of teaching. The skills and related technical information taught the students are those which are needed by the typical worker in an occupational area. Theory is related to the skills of the occupation. Advisory committees are used to aid in promoting, establishing, maintaining, and continuously evaluating the program.

Careful attention is given to selection of students for admission to trade, technical, and industrial education courses. General school records and exploratory experiences and activities are carefully reviewed in determining whether or not a prospective student has the ability, aptitude, and interest needed to master the skills and knowledge required in the occupation. General education is included in the program for all students in trade, technical, and industrial courses.

NOTE: If the school deems it advisable, different areas within trade, technical, and industrial education may be evaluated separately. If this is done, the name of the area should be placed on the line provided above. If all areas are evaluated together, individual area differences can be noted under "Comments."

Before proceeding with work on this section, prepare and attach as part of the section a list of the major goals of the program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

Checklist

1.	The prog	ram is under the	general direc-
	tion and	has the support	of the admin-
	istrative	officers of the so	chool system.

- 2. The principal and other school personnel show an interest in the program and have an understanding of its objectives.
- 3. Qualified vocational education personnel, both administrative and supervisory, are directly responsible for the program.
- 4. Vocational education administrative and supervisory personnel participate in the selection of teachers and coordinators.
- 5. Financial support is given to the program as evidenced by provision for competent instructors, building facilities, equipment, materials, supplies, and aids.
- 6. An employer-employee advisory committee helps to plan the program.
- 7. Class sizes are limited to a number that can be instructed effectively in the facilities available.
- 8. Provisions are made for in-service education of teachers.
- 9. The trade, technical, and industrial education program is planned to meet the industrial needs of the labor market on a wide geographical basis.

- 10. There is recorded evidence that there are job opportunities for those students enrolled in each course on a local, state, or national basis.
 - 11. Students are carefully selected on the basis of interest, aptitudes, and ability as reflected by records, teacher recommendations, and interviews.
 - 12. The time spent in skill development complies with the state plan for vocational education.
 - 13. Information units and study are planned to contribute directly to the trade or occupation for which training is given.
 - 14. Provisions are made for students in the program to participate in the social and extracurricular activities of the school.
 - 15. Trade, technical, and industrial education students are scheduled in general education classes with academic students.
 - 16. Provisions are made to work cooperatively with other agencies in occupational programs.

B. COOPERATIVE WORK EXPERIENCE PROGRAMS

While major attention of the school is directed to its in-school program, the values of informal work experience for all students are recognized, and more formal, supervised work programs related to curricular areas are provided.

Informal work activities are encouraged by the staff, and placement facilities are available to notify students of work opportunities and to assist in a liaison capacity between student and employer. Opportunities for work within as well as outside the school are identified.

Supervised and cooperative work programs providing for application of vocational skills and understanding learned in school are organized and operated by representatives of both the school and community. These encourage further development of skills and understanding in a realistic business or industrial situation as well as reduce costs for the school.

Student Activities Program

NAME OF SCHOOL	DATE	
Self-evaluation by		
	• • • • • • • • • • • • • • • • • • •	_
		_

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The school provides educational experiences of several types. Though the classroom instructional program is the dominant means of attaining a school's objectives, they cannot be met solely through the formal courses of study. The student activities program is generally the major means of fulfilling those objectives that are not adequately served by regular classroom instruction. Typically, student activities are characterized by extensive student participation in both planning and carrying-out of these activities.

Experiences in the student activities program are designed to help meet the leisure, recreational, social, and emotional interests and needs of all students. These experiences also provide opportunities for self-directed specialization in areas of the curriculum of particular interest to individual students.

The student activities program is planned to develop desirable social attitudes in situations providing opportunity for individual, small-group, and entire school participation. It provides ample opportunity for development of understanding and cooperation among social and ethnic groups within the student body. The activities are conducted under conditions that increase the likelihood of carry-over to out-of-school life. Under competent guidance, students share responsibility for selecting, organizing, and evaluating the activities and outcomes. In all activities, the development of democratic leadership and cooperative attitudes is a major objective. Extensive opportunities are provided for this development. Policies have been formulated to avoid overemphasis ca contests and the exploitation of students for the benefit of the school or community.

NOIE: Before proceeding with work of this section, prepare and attach as part of the section a list of the major goals of the student activities program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2, the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. GENERAL NATURE AND ORGANIZATION A. GENERAL NATURE OF THE PROGRAM

Checklist

The student activities program:1. Is integrated with and supplementary to the program of studies.2. Provides opportunities for leadership	na 1 2 3 4	10. Provides membership opportunities to all students on a democratic basis and helps to prevent the development of clannish tendencies and cliques.	na 1 2 3 4
and for experiences in cooperation.3. Gives students opportunities to exercise initiative and to assume responsibilities.	na 1 2 3 4	11. Receives active cooperation and support from members of the school staff.12. Receives cooperation and support from	na 1 2 3 4
4. Provides opportunities to coordinate some activities of the home, school, and community.	na 1 2 3 4	parents and other members of the com- munity. 13. Provides activities for the variety of in-	na 1 2 3 4
5. Frovides opportunities for students to as 1st in resolving school issues and problems.	na 1234	terests and needs of individual students. 14. Provides for activities to be organized, changed, or discontinued as student in-	na 1 2 3 4
6. Seeks to develop desirable attitudes, ideals, and appreciation essential for the		terests and needs change. 15. Provides orientation for students new to	na 1 2 3 4
age in which we live. 7. Fosters the development and perpetuation of desirable school traditions, such	na 1 2 3 4	the program. 16. Avoids the exploitation of students. 17. Is geared to the general economic levels	na 1 2 3 4 na 1 2 3 4
as standards of conduct, school festivals, and historical observances.	na 1234	of the school population.	na 1 2 3 4
8. Seeks to make every student and teacher feel accepted in the total life of the school.	na 1 2 3 4	18.	no 1 2 3 4
9. Seeks to make each member feel a sense of loyalty and responsibility to the			
school.	na 1 2 3 4		

Supplementary Data

1. Describe membership and activities of any adult community groups which are associated with any part of the student activities program.

	To what extent do the three successive issues indicate the quality of the publications?	ı	na	1 :	2 3	3 4	;

VI. MUSIC ACTIVITIES

Additional criteria applicable to music activities are to be found in Section 4-12, "Music." If the extraclass music activities are distinctly separate from the music offering in the program of studies, it is advisable to adjust features in Section 4-12 to the individual school's organization of its music activities.

Checklist

1. A variety of extraclass music activities are available to students.	nα	1	2 :	3 4	i Ì	Overemphasis upon competitive music activities is avoided. Nonparticipants as well as participants	na	1	2 :	3 4
2. Extraclass music activities make provision for different ability levels.	na	1	2 :	3 4		indicate interest in and appreciation of the music activities presented to the en-				
3. The scheduling of extraclass music activities is coordinated with that of other out-of-school interests of students.		1	2 :	3 4		tire school.				
4. Counseling is provided to assist students in the selection and extent of participa-					1		na	1	2	3 4
tion in the extraclass music activities.	na	1	2	3 4						

Supplementary Data

1. List the music organizations and number of members in each. (Use separate sheet if necessary.)

2. Describe the development of any new music groups or activities during the last two years.

3. Give the percent of the school's students participating in one or more music organizations.

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The school's function is to provide the student with a variety of worthwhile ideas and experiences and to help him develop a desire for further exploration. These ideas and experiences may be transmitted directly by live communication or vicariously through recorded print, sound, or images. Since both means of contact are vital to the learning process, the teacher has always needed the support of materials and services to broaden and extend the range of learning. Librarians have long served this function by making printed materials available and encouraging their use. In recent years, mechanical and electronic advances have provided many new ways of storing and communicating ideas. Thus the library now has available many new materials and services to supplement its basic educational medium, the book.

The educational media program must remain an integral part of the school's overall educational activities. It must provide not only materials and services, but also assistance in their production, organization, and effective use. Therefore, certain terms employed throughout this section refer both to personnel of the library and to those dealing with audio-visual materials and services.

Media generalists are staff members who have training in both audio-visual services and library science; media specialists belong in one of the following groups: library scientists, audio visual personnel, programmers, archivists; subject specialists are college graduates who have subject majors; technicians can be repair and maintenance specialists, graphics producers, projectionists, photographers, electricians, computer programmers; and volunteers are student and adult helpers.

Because of the technical nature of many of the newer media, some schools have developed separate administrative organizations to provide audio-visual services to students and teachers. Others have developed an integrated administrative unit, called the "instructional materials center" or "educational media center," which furnishes those services usually associated with the library and, in addition, provides a wide variety of audio-visual and electronic services. The criteria that follow are intended for the evaluation of the entire range of educational media services, regardless of the degree to which their administration has been unified.

EVALUATIVE CRITERIA

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. ORGANIZATION AND MANAGEMENT A. FINANCIAL PROVISIONS

Che	ck	list
OHC		uo.

Checklist	
1. The director of educational media services constructs a detailed budget after consulting faculty members. 2. A sum of money is budgeted annually for the educational media program, and the directors of the respective services are informed of the amount available to them. 3. Budget allotments may be spent as needed any time during the year. 4. The school accounting system facilitates efficiency in the expenditure of budgeted funds by keeping accounts current to funds available, disbursements, encumbrances, balances, and income. 5. The budget provides for (check those provided for): Capplementary Data 1. Enter expenditures for the past two years and the budget.	Purchase of books, periodicals, newspapers, and pamphlets. Purchase of audio-visual materials. Rental of materials Purchase and maintenance of audiovisual equipment. Care, repair, and binding of printed materials. Purchase of professional literature, institutional memberships in professional organizations, and professional travel. Purchase of supplies and equipment for producing educational materials. 6. no 1 2 3 4

B. SELECTION OF MATERIALS AND EQUIPMENT FOR ACQUISITION

Checklist

 A process of evaluation is applied to the selection of all materials. Equipment is selected on the basis of mechanical and performance specifications as determined by the staff. A file of film and television study guides (teacher guides) is available for reference. The following factors receive consideration in the selection of educational media (place a check in front of these that receive consideration): Present and potential academic and recreational interests and needs of students. Range of reading ability among students. Range of other abilities among students. Educational objectives of the over- 	na 1 2 3 4 na 1 2 3 4 na 1 2 3 4 na 1 2 3 4	The informational content of the curriculum. Present inventory and distribution of materials. Types and content of materials requested by individuals. Data on circulation or the extent of use of materials of various types. Need for basic selection tools and educational media bibliographies for specific subjects. Quality of materials in terms of accuracy of content and approach. Availability of materials and equipment from nonschool sources. The instructional organization (such as teaching, independent study, language laboratories, and home use of audio-visual materials).	
all curriculum.		5.	na 1 2 3 4

Supplementary Data

- 1. Describe the process of selection and evaluation of materials.
- 2. List the selection tools and resources.
- 3. Describe any cooperative activities engaged in by school and community agencies regarding educational media.

	tion?	na	1	2	3	4

Guidance Services

NAME OF SCHOOL	 DAIL
Self-evaluation by	

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

Guidance services constitute an integral part of the educational program. These services should be under the professional direction and coordination of qualified school counselors and the administrative leadership of the school's principal. These services seek to focus the educational processes on the individual student.

The guidance program seeks to assist all students to mature in self-understanding, self-responsibility, decision-making ability, development of values, and attainment of the attitudes and skills required for productive citizens in our society.

The program consists of specialized services, some of which are described in this set of checklists and evaluations. These services entail participation by all members of the school's staff. In addition, these services are an integral phase of the school system's program of student-personnel services. It is essential that the guidance program be coordinated with, and make full use of, the resources of the home and community.

NOTE: Before proceeding with the work of this section, prepare and attach as part of the section a list of the major goals of the guidance program that will aid in the achievement of the objectives of the school (as stated in Section 3, "Philosophy and Objectives").

EVALUATIVE CRITERIAFourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

I. ORGANIZATION

The school's guidance program functions within a context characterized by (a) charity of purpose, (b) clearly defined leadership and organization, and (c) completeness of scope of service.

Checklist

 The school guidance program consists of counseling services, informational services, student and community studies, placement services, and consultation services. The guidance services are provided for 	na 1 2 3 4	8. Mature in seif-understanding, self-responsibility, and decision-making ability.9. Develop values and skills needed for effective and productive living in our society.	na 1 2 3 4
all students at all grade levels. 3. Administrative, guidance, and instructional staff members regard guidance service as a cooperative undertaking in which each has well-defined responsibili-	na 1 2 3 4	10. C. ROLES OF TEACHERS IN THE GUIDANCE PROGRAM

A program of guidance services cannot operate effectively without the active participation of classroom teachers. The following statements describe the classroom teacher's role in the guidance program.

Checklist

Classroom teachers: 1. Employ both formal and informal procedures established in the school for communication between individual teachers and counselors. 2. Use cumulative record information to increase understanding of their students and the student body. 3. Use information from the cumulative records in providing for individual differences among students in their classes. 4. Contribute appropriate data to the cumulative guidance folder. 5. Assist counselors in their study of particular students. 6. Serve as professional participants in case study conferences. 7. Seek help from counselors in their study of and attempts to help students. 8. Obtain educational and vocational guidance information from counselors for use in specific units and courses. 9. Refer to the counselor students who are identified to be in need of special counseling assistance. 10. Cooperate with counselors in planning and carrying out recommendations. 11. Attempt to help on the problems that students bring to them. 12 3 4 13. Participate in the formulation of basic policies for the school guidance program. 12 3 4 13. Inc. Inc. Inc. Inc. Inc. Inc. Inc. D. CONSULTATION AND REFERRAL RESOURCES

Guidance needs of students cannot be met completely through the cooperative efforts of counselors, teachers, and school administrators. In addition, student personnel specialists (such as school health personnel), psychologists, social workers, welfare agencies, javenile courts, psychiatrists, clergymen, and personnel counselors should be used as student needs dictate.

Checklist

III. GUIDANCE SERVICES

For purposes of organization and description, the guidance program is divided into sets of "services." These services must be well coordinated if the guidance program is to contribute effectively to the attainment of the school's objectives.

A. COUNSELING, SMALL-GROUP PROCESSES, AND CONSULTATIONS

Qualified counselors assist students in their planning, decision-making and personal development, individually through counseling, and collectively through small-group processes. To promote the effectiveness of their efforts, counselors consult with teachers, parents, and others significant in the lives of the students.

Checklist

Counseling and small-group processes:	•	9. Are scheduled and protected from en-	
1. Complement each other, neither displac-		croachments by nonguidance functions.	na 1 2 3 4
ing the other.	na 1 2 3 4	10. Are conducted by counselors who are

e)	How effective are conferences in enlisting the efforts of teachers, parents, and others in cooperative ac-					
	tivities?	na	1	2	3	4

B. THE STUDY OF STUDENT DEVELOPMENT

Comprehensive information about students is essential to an effective guidance program. This information is most useful when it is developmental in nature, gathered cumulatively from preschool through postschool for each student. This information needs to be systematically recorded, effectively and ethically used, and, periodically, sifted and brought up to date.

Checklist

1. The sources of information are comprehensive and reliable (check those used): Records from schools previously attended, including elementary schools. Appropriate tests of scholastic abilities, achievement, special aptitudes, and educational progress. Inventories of educational-vocational interests and aspirations. Interviews.	na 1 2 3 4	 7. Information about students is made available only to persons judged by the school's counselors and administrators to be entitled to the information and competent to use it properly. 8. The information recorded provides a developmental view of students which can be interpreted to students, parents, and other persons who can use it constructively. 	na 1 2 3 4
2. The physical status and special characteristics of each student are studied by means of periodic, professional physical	na 1234	 Counselors furnish teachers with information about students' characteristics and needs, both systematically and in response to special needs. 	na 1 2 3 4
examinations. 3. Interviews by school counselors are used to verify and augment information gained by other means.	na 1 2 3 4	10. Professional persons, both in and out- side the school, to whom students are referred by counselors are provided in-	
4. Appropriate information gained by teachers and other staff members is accumulated in the student's personnel		formation gathered by the school. 11. Case studies and case conferences are used to collate, interpret, and apply the information about students.	na 1 2 3 4
folder. 5. Information regarding each student's	na 1 2 3 4	12. Professional staff members periodically sift and assess information about stu-	
social adjustment, aspirations, and values is gathered and recorded by means that protect the student's right of privacy.	na 1234	dents to keep it up to date and valid. 13. Information about students is accumulated and studied by school counselors to	na 1 2 3 4

School Facilities

NAME OF SCHOOL

DATE

Self-evaluation by

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

The school facilities, consisting of the site, buildings, equipment, and services, are major factors in the functioning of the educational program. The facilities provide more than a place for instruction. The physical environment assists or limits student achievement of desirable learning outcomes.

The school facilities must provide a physical environment which contributes to the successful conduct of the program that has been designed to meet the educational needs of youth. This requirement encompasses provisions for a variety of spaces for teaching and for extraclass, recreational, and community activities. The buildings must provide temperature, ventilation, illumination, and acoustical conditions and sanitary facilities and services conducive to the development of acceptable behavior as well as essential to the health and well-being of its occupants. The buildings must also be designed, equipped, maintained, and inspected

so as to minimize the possibility of harm to the occupants in the event of accident, fire, or other emergency or disaster conditions.

The buildings should be adequate to meet current and future program demands. The spaces within should be sufficiently flexible to provide for multiple uses of the areas in the over-all curricular and cocurricular programs.

The facilities, both indoors and outdoors, should be developed to take advantage of all important features of the site, with appropriate attention given to design and aesthetics. The grounds about the buildings should include well-kept lawns and shrubbery. The various elements should be used whenever they are appropriate to learning activities. The school facilities should be an integral part of a community planning program. The entire facility should stimulate students and staff to use and care for its areas effectively.

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work-evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation

III. BUILDING SERVICES

A. ILLUMINATION

Checklist

- 1. Appropriate intensity and brightnessbalance of light are provided for by welldesigned fixtures.
- 2. Illumination of the assembly space and the stage is adjustable to varying needs.
- 3. Stairways, ramps, corridors, toilet rooms, and similar spaces are properly illuminated.
- 4. Provision is made for regulation of lighting in all spaces.
- 5. Electrical outlets are of safe design and are properly located.
- 6. All control switches are easily accessible.
- 7. Paint and finish on walls, floors, and desks provide nonglossy reflecting surfaces.

- 8. All writing surfaces and reading areas are designed to minimize glare in the student's field of vision.
- 9. Ceilings and other surfaces have appropriate reflection values.
- 10. All spaces are surveyed periodically to ascertain light intensity.
- 11. Light fixtures are kept clean and are inspected regularly for maintenance at maximum efficiency.

D. MISCELLANEOUS BUILDING SERVICES

Checklist

 The building is inspected by school personnel and at specified intervals by public inspectors as a precaution against explosion and fire. The installation of all electric conduits and wiring has been inspected and certified by a public inspector. Fire extinguishers (appropriate to the area) and other fire-fighting equipment are readily accessible. Fire extinguishers are maintained in acceptable condition. Fire gongs or alarms are distinct from regular program signals. Fire gongs or alarms are in good working order, and where feasible, are connected to the local fire department. Fire alarm stations are placed in accordance with code regulations. An alternate alarm system for use in case of power failure is available. All fire extinguishers are inspected and approved annually. Personnel are trained in the use of fire extinguishers and fire safety equipment. All fire alarms are placed so as to be 	12. The alarm system is designed so that the master control quickly designates the location of fire or machinery failure. 13. Provision is made for the care and safe storage of all combustible materials. 14. All combustible materials are stored in fire-resistant areas. 15. Workroom and dressing facilities are provided for the custodial staff. 16. Conveniently located service and supply closets are provided for the custodial staff. 17. Custodial supply closets are equipped with hot and cold water and sinks. 18. Storage space is provided throughout the building in accordance with needs. 19. Exterior lighting is provided for night use of facilities and as a safeguard against vandalism. 20. Custodial supply closets are adequately ventilated. 21. School Staff and Administration

NAME OF SCHOOL	DATE
Self-evaiuation by	
	Application of the state of the

GUIDING PRINCIPLES

These principles are offered for your acceptance, rejection, or modification. Please feel free to make changes.

A competent staff is essential for a good school. The staff is a cooperating group of individually capable persons devoted to common educational purposes and motivated by a desire to develop the philosophy and carry out the clearly formulated objectives of the school. Staff members should possess qualifications of preparation, experience, and attitude that contribute to effective learning. The number of staff members is adequate for the educational program, the school enrollment, and the special needs of the students. The teaching load and the total working load are such that maximum efficiency in service is assured. Salaries are maintained at a level sufficient to ensure a standard of living comparable with the social demands on the profession and to avoid the necessity for securing supplementary income.

The primary responsibility of administration is to the educational program. Every condition of management and organization is worthwhile to the extent that it is beneficial to teaching and learning and contributes

to the community of which the school is a part. Coordinating instruction, activities, and services into an effective educational program requires talented and forward-looking leadership.

Responsibility for the satisfactory functioning of the school rests with the principal. His responsibilities include leadership in the educational program, in supervision and improvement of instruction, in community relations, and in management and maintenance of plant and facilities.

A pervasive process of democracy is implied in all administrative actions. Appropriate opportunity is given for these concerned with or affected by the educational program to participate in its development and evaluation. The need for cooperative effort toward the attainment of educational goals is recognized, and its practice is encouraged. Democratic procedure, however, does not preclude independent administrative action when consistent with established policy.

EVALUATIVE CRITERIA Fourth Edition

INSTRUCTIONS

General

Members of school staffs making self-evaluations should understand that a regular part of the evaluation process consists of modifying the statements of guiding principles and of checklist and evaluation items. The purpose of the modifications is to make the statements consistent with the characteristics of the school and community and with the objectives of the school. Unless it is obvious, the school should explain the reason for the change and its relation to the philosophy and objectives and to the needs of the students.

The two pivotal points of this evaluation are (1) the characteristics of the school and community, and (2) the school's philosophy and objectives. Therefore, Section 2, "School and Community," and Section 3, "Philosophy and Objectives," should be kept in mind when the various features of this section are being checked and evaluated. Persons making evaluations should ask: "How well do the practices in this school meet the needs of the school and community?" and "How well do the practices conform to the philosophy and objectives of the school?" When evaluations are made, factors such as size, type, location of school, financial support available, and state requirements should not be permitted to justify failure to provide a program and facilities appropriate to the needs of the school and community and to the philosophy and objectives of the school. Also, the twofold nature of the work—evaluation and stimulation to improvement—should be kept in mind. Careful, discriminating judgment is essential if these purposes are to be served satisfactorily.

Checklists and Evaluations

The checklists and evaluations should be evaluated on the following 4-point scale:

- 4 Excellent
- 3 Good
- 2 Fair
- 1 Poor or missing
- na Not applicable

Question will frequently arise about the basis for comparison of points on the scale. The answer is extremely difficult to give. In any entity as complex as a school, it is not easy to describe in detail what excellent or poor really means in the hundreds of items for which evaluations are required. The best answer seems to be that the evaluator should draw upon his total experience in schools and make the best judgment he can on the basis of that experience. It should be kept in mind that 4 does not mean ideal or perfect. There is reason to believe that some schools are underrated in the self-evaluation because an impression is held that 4 should be reserved for an unattainably high condition.

Each person who makes an evaluation should try to be

as accurate as possible. If a slight change in the wording of an evaluation item would make it more appropriate to the school being evaluated, such a change should be made. If important elements of the school's program are omitted, the subcommittee members should consider themselves free to add checklist or evaluation items that will make the description more complete.

On this scale, if you wish to indicate the most desirable condition possible, circle the number 4. On the other hand, if you wish to indicate the least favorable response or indicate a condition that is missing, circle the 1. If you wish to show an evaluation that is good but less than excellent, circle the number 3. Likewise, to show a trait that is less than good, but better than poor, circle the number 2.

Let us consider an example that will help in understanding these directions. Examine the statement "Classrooms are equipped with demonstration facilities." If, in your judgment, the classrooms are equipped with demonstration facilities that are exemplary, excellent, or some of the best that you have ever seen, you will then circle the number 4. On the other hand, if you decide that the demonstration facilities in the classroom are good but not the best, you will circle the number 3. If the demonstration facilities are missing or are totally inadequate, you will circle the 1. If, however, the facilities are not good, but are not poor enough to deserve a 1, you will circle the number 2.

Comments

The space under the heading "Comments" at the end of each subsection should be used to provide additional information needed to give a complete report of that area and to describe any condition that is not adequately covered elsewhere in the subsection. The space can also be used to clarify or amplify items in the checklists or evaluations. Subcommittees are encouraged to use this space every time that its use will aid in describing the area or in explaining a judgment or rating.

Supplementary Data and Additional Areas

Some facets of programs may not be described by the checklist and evaluation statements. For this reason, additional information items are sometimes requested under Supplementary Data. If portions of a program—or additional subject areas—cannot be adequately covered by amplifying Supplementary Data and Comments, it is suggested that the following outline (which is also that employed in most of the sections) be used:

- I. Organization
- II. Nature of Offerings
- III. Physical Facilities
- IV. Direction of Learning
- V. Outcomes
- VI. Special Characteristics
- VII. General Evaluation.

Comments

2. Superintendent of Schools

The following functions are commonly regarded as the special responsibility of the executive head of the school system, but their performance may be delegated to other competent persons. Check on the basis of performance of the functions by the proper person, regardless of title.

Checklist

The superintendent of schools: 1. Has a broad background in general education. 2. Has extensive professional preparation. 3. Has successful teaching experience. 4. Has successful administrative experience. 5. Exhibits a well-formulated philosophy of education. 6. Shows an awareness of the educational needs of the community. 7. Keeps the board of control informed, through periodic reports, regarding the school's objectives, achievements, needs, and plans for the future. 8. Plans and presents annually the budget for consideration by the board of control. 9. Formulates the budget in conformity with legal requirements. 10. Arranges for the accounting system to be organized in sufficient detail to make computations of important unit costs possible. 11. Administers or supervises the administration of the business affairs of the school system. 12. Submits reports regularly to each individual charged with the use of funds or supplies, indicating the status of his account. 13. Exercises proper control over the care and distribution of supplies and equipment. 14. Supervises all school employees for appointment on the basis of their qualifications for particular services. 16. Conducts research concerning educational problems of the school and the community. 17. Uses the results of research in planning the educational problems of the studing principal and faculty in formulating recommendations, policies, and the budget. 18. Involves the building principal and faculty in formulating recommendations, policies, and the budget. 19. Secures the cooperation of the staff in carrying out recommendations and policies. 19. Facilitates the professional improvement of the staff. 20. Facilitates the professional improvement of the staff. 21. Assists in the coordination of school and community activities. 22. Considers the availability of community or other finances in arriving at practical solutions to educational program on a 1 2 3 4 and 12 3 4 and 12 3 4 and 12 3 4 and 12 3 4 and 12 3 4 and 12 3 4 and 12 3 4 and	Checklist		and the state of t

b) How extensive is the educational experience of the principal and his assistants?								

Comments

3.2. DUTIES AND FUNCTIONS

Although the following functions are commonly the special responsibility of the principal of the secondary school, their performance may be delegated to others. Check and evaluate on the basis of performance of the functions by the proper person, regardless of title. If the principal is also the head of the school system, the criteria dealing with the superintendent of schools should be checked with reference to the principal.

326 SECTION 9 · SCHOOL STAFF AND ADMINISTRATION

4. Salaries and Salary Schedules

Include here only classroom teachers who give part or full time to the secondary school. Report those employed full time by the school system at the actual salary received, regardless of whether or not full time is given to the secondary school. Report those employed only part time by the school system at the equivalent full-time salary. Thus, a teacher employed for half time service at \$4,000 per year should be reported as receiving \$8,000. If room and board constitute part of the remuneration, include them at a fair monetary equivalent and give allowance made for this factor under "Comments." Indicate in the following table the number and percent of teachers in each salary classification.

Salary	Men	WOMEN	To	ГАI.
SALARY	MEN	Thomas.	Number	Percent
Over \$15,000				
\$14,500-\$14,979

Checklist

The schedule is designed to bring together teachers, students, materials, and facilities in the most effective manner.
 The schedule provides for the most

2. The schedule provides for the most effective use of teachers' abilities and time.

3. Teachers participate in decisions about class size and frequency of meetings.

4. The schedule provides for sufficient time for teacher preparation, planning, and student conferences.

5. Computer assistance is utilized when available.

6. The schedule provides maximum opportunity for students to accept responsibility for their own learning. 7. The master schedule includes teacher, student, and room assignments and information about classes and the times they meet.

8. The master schedule is designed to keep conflicts to a minimum.

9. The various assignments of teachers and the assistance they are provided are considered when determining teacher load.

10. The schedule provides for opportunity to engage in new instructional designs and methods (such as team teaching, large-and small-group instruction, independent study, and ungraded classes).

na 1 2 3 4

Supplementary Data

1. What kinds of assistants (such as clerical or teacher aides) are provided to teachers?

2. Describe the features of the school schedule, its construction and operation.

Evaluations

a)	How adequately does the schedule provide for efficient teaching-learning relationships?	na	1	2	3		4
•	How satisfactory are teacher loads?	na	1	2	3	,	4

334 SECTION 9 · SCHOOL STAFF AND ADMINISTRATION

E. MAINTENANCE AND OPERATION OF FACILITIES

Checklist

1. Regular inspections of buildings and grounds provide checks on conditions affecting safety of school personnel.	na 1 2 3 4	11. Student traffic throughout the building	na 1 2 3
2. Regular inspections of buildings and grounds provide checks on conditions		is planned to avoid congestion and to ensure safety.	na 1 2 3
affecting health. 3. Regular inspections provide checks on	na 1 2 3 4	12. Regulations provide for the orderly parking of staff and student automobiles.	na 1 2 3
the economic efficiency of the facilities operation.	na 1 2 3 4	13. Hazardous conditions and pre-tices observed by students and staff members

a	To what extent do the school staff and administration meet the needs of students as indicated in Section					
	2, "School and Community"?	na	1	2	3	4
<i>b</i> ,	To what extent are the policies and procedures of the school staff and administration consistent with the philosophy and objectives as developed in Section 3, "Philosophy and Objectives"?					
c)	To what extent is the school identifying problems related to school staff and administration and seeking their solution?	na	1	2	3	4

Individual Staff Member

GUIDING PRINCIPLES

A competent staff is an indispensable element of a good school. Such a staff is not merely a collection of individually competent persons; it is a cooperating group whose members have common purposes and are motivated by common ideals. Each member gives evidence of awareness and understanding of educational problems and shows continued professional growth. Before selection to the staff, each member produces evidence of adequate preparation for his particular task and of the attributes needed to teach and work with youth. Diversity of preparation and of viewpoints is desirable for a well-rounded staff, and its members should have the ability and will to work together willingly, harmoniously, and efficiently for the good of students and school.

In the selection of individual staff members, attention is given to teaching ability, personality, health, and character. Each staff member has a broad general education, extensive preparation in his specialty, and appropriate social development.

INSTRUCTIONS

This section is to be filled out by each member of the professional staff. The material called for serves two purposes. First, it helps each staff member to make a considered examination of his present status as a professional person. Second, it provides a summary of information useful in viewing the staff of a given department or of the school as a whole. For some items, approximations are acceptable—for example, a staff member need not seek records to determine whether it is 31 or 32 semester hours of credit that he has in a specific area. If he is uncertain about what information is wanted, he should ask the steering committee for guidance. Here, as in other sections of the Evaluative Criteria, the staff member is encouraged to modify any item to make it more acceptable or understandable and also to feel free to provide any additional information that he feels will be helpful.

Each staff member should keep a file of official documents related to his preparation and experience.

I. TEACHER LOAD AND ASSIGNED DUTIES

Complete the table below for each class and assigned duty or activity. In some subjects, such as physical education, it may be more satisfactory to report by grades rather than classes or sections. Assigned duties include regular activities such as study hall, library, supervision, guidance, committee work, research activities, and all extraclass student activities. Be sure to include all activities, whether or not they are eligible for additional compensation. As the final category, fill in the number of unassigned periods or hours per week. Use the space below the table to describe additional elements of your work load.

		Number	Periods of	Modules
LIST EACH CLASS AUGHT AND EACH ASSIGNED DUTY OR ACTIVITY	Grade Level(s)	Students Enrolled or Participating	Number per Week	Length in Minutes of Each
Unassigned	_			

II. PREPARATION AND EXPERIENCE

List data chronologically for each of the following categories, starting with the most recent date. If necessary, attach additional sheets of supplementary data.

	Hours Professiona mate) Education Minor (apprax, hrs		
Piace	Semester Hours (approximate) it Major Minor	Total:	
	Major Minor Subject Subject	Ē	Community Year

Summary of the Self-Evaluation

	•	-	_

NAME OF SCHOOL	DATE
Prepared by Self-Evaluation Steering Committee	

GUIDING PRINCIPLES

In any evaluative undertaking, it is desirable to summarize the findings, and a school evaluation is no exception. A summary provides many benefits, as well as marks the conclusion of the study. It constitutes one form of record of the major findings and adds emphasis to those major findings.

The order of summary statements should follow the same order as the sections listed below:

- 2 School and Community
- 3 Philosophy and Objectives
- 4 Curriculum
 - 4-1 Agriculture
 - 4-2 Art (Including Crafts)
 - 4-3 Business Education
 - 4-4 Distributive Education
 - 4-5 Driver and Traffic Safety Education
 - 4-6 English
 - 4-7 Foreign Languages
 - 4-8 Health Education
 - 4-9 Home Economics
 - 4-10 Industrial Arts
 - 4-11 Mathematics
 - 4-12 Music
 - 4-13 Physical Education
 - 4-14 Religion
 - 4-15 Science
 - 4-16 Social Studies
 - 4-17 Special Education
 - 4-18 Trade, Technical, and Industrial Education
- 5 Student Activities Program
- 6 Educational Media Services—Library and Audio-Visual
- 7 Guidance Services
- 8 School Facilities
- 9 School Staff and Administration
- 10 Individual Staff Member

EVALUATIVE CRITERIA
Fourth Edition

INSTRUCTIONS

The self-study steering committee is responsible for completing the Summary of the Self-Evaluation section.

Using the major findings as a base, the school can embark on a program, according to a schedule of priorities, to improve conditions found to be below a desired level. After a sufficient length of time for progress to have been made, the summary and priorities established can be reviewed to provide the basis for a follow-up of the evaluation. Regular follow-up and review help make evaluation a continuous process rather than one that is completed and then forgotten. Continuous attention such as this is conducive to improvement of any school.

The form of the summary should be kept simple and short; yet it should contain the major findings of the report. It is suggested that two general types of entries be made in the summary: one citing strengths and one citing weaknesses that need considerable attention. A school will want to consider that portion of each section of the *Evaluative Criteria* entitled "Special Characteristics." From this section, the *major* strengths and weaknesses can be discerned and a description of them placed in the summary. Of course, any section not evaluated by the school should be omitted.

The following are examples of the two general types of entries that might be used in the Summary

section:

Example 1

MAJOR STRENGTH OF THE SCHOOL

-

Cited in Section No. 9

Section title: School Staff and Administration

Page 333

Description of Strength:

A well-planned system of teacher assistants provides teachers with released time from clerical duties for more creative work.

Provisions That Contribute to This Success:

Money is available for this purpose. The system is well planned. It has teacher acceptance. The staff has a professional, forward-looking attitude.

Example 2

MAJOR WEAKNESS OF THE SCHOOL

Cited in Section No. 7

Section title: Guidance Services

Page 298

Description of Weakness:

The school does not have a comprehensive testing program. The achievement testing is irregular and given at only one grade level. Entrance testing is not carried out for incoming ninth-grade students or transfers. There is no schedule available of the tests administered in the school. The school has no written policy or suggestions for use of test data.

Recommendations for Improvement:

A national standardized battery such as the Iowa Tests of Educational Development or Sequential Tests of Educational Progress should be administered annually in the fall.

The summary may be written on the following pages plus additional sheets, or entirely on separate sheets.

Note: The following forms are suggested for use in summarizing the self-evaluation; they be modified as necessary to suit the needs of the individual school.	should, of course,

Directions for ordering

EVALUATIVE CRITERIA

For detailed instructions as to materials required for an evaluation see Page 7 of Manual, Section 1.

The National Study of Secondary School Evaluation recommends that a secondary school is best evaluated by making a self-evaluation using the **Evaluative Criteria** and having this self-evaluation checked by a visiting committee

If no one on the staff has had experience with evaluations using these materials, order a bound copy of **Evaluative Criteria**, Fourth Edition, which contains all of the sections, and examine it before securing the additional materials that will be needed.

TH EDITION

Before placing an order for materials for an evaluation, the school should study the savings possible by ordering sets and packages. Because school needs vary widely, only certain sections are prepackaged; but most schools can save money by purchasing separate sections in sets or packages rather than separately. For example, a set of General Area Sections sells at \$3.00 rather than at \$4.40 if ordered separately. Similarly Section 10 ordered in a package of 10 copies costs \$2.00 rather than \$4.00 if ordered separately.

A minimum order for an evaluation should be:

1. Two bound copies for reference.

2. Three unbound sets of General Area Sections, 1-11.

3. Two copies of Section 10 for each member of the professional staff.

4. Two copies of each Subject Field Section for those subjects offered by the school.

Use order form on other side
